I. APPROVAL OF MINUTES

1. April 13, 2022

Chairman McMillan noted that they had a new member, Lynn Vaccaro, joining the Conservation Commission. Also, Henry Mellynchuk has resigned from the Commission due to scheduling conflicts. Ms. Vaccaro, Mr. Jankowski and Vice Chairman Collins were all attending via Zoom.

Mr. Jankowski moved to approve the minutes from the April 13, 2022, Conservation Commission Meeting, as amended, seconded by Ms. Gindele.

Mr. Jankowski noted that the second paragraph on page 8 should say "for the protection of natural and water resources" instead of "to protect City water."

The motion passed by a 5-0-2 vote. Ms. Tanner and Ms. Vaccaro abstained.

Chairman McMillan clarified that Ms. Vaccaro would not be voting today because it was her first meeting. That meant that both Alternate Members would be voting.

II. WETLAND CONDITIONAL USE PERMITS (OLD BUSINESS)

1. 333 Borthwick Avenue
HCA Health Services of NH, Inc. dba Portsmouth Regional Hospital, Owner
Assessor Map 240, Lot 2-1

Chris Acres, Matt Larkin, and Chris Dumont spoke to the application. The proposal is for a radiation oncology addition at Portsmouth Regional Hospital. It's a one-story

addition located on the southeast corner of the hospital. The addition will be in the 100-foot buffer and slightly encroaching in the wetlands themselves. The building is an irregular shape to avoid the Eversource easement. The disturbance includes a few slivers of the buildings and there will also be temporary impacts for construction. They will expand the pond to provide more wetland. The permanent impact is 200 sf. The temporary impact is 4,400 sf. They will be adding 1,150 sf of wetland area. They are adding in the pond to mitigate the impact. Staff recommended approval with two conditions. The first was to provide plantings, which can be added. They will coordinate with Gove Environmental on what plantings to add. The other condition was to add a maintenance plan, which they will include. There will be an erosion control plan to protect the area during construction.

Ms. Tanner questioned what time of year the construction would take place. Mr. Acres responded that they would like to start this summer. Ms. Tanner commented that there was a mallard nesting regularly in that area. It would be good to start after the babies are born.

Ms. Gindele questioned why they didn't add a floor to the recent addition. They could have built up instead of out. Mr. Acres responded that this addition will be next to the imaging center and the addition is for the radiation oncology center. It has an expensive piece of equipment that has to be located on the first floor. Mr. Larkin added that the foundation required for the radiation room is a large cement slab. The weight would not be able to be supported on an upper floor.

Ms. Court commented that the demolition plan shows shrubs and trees being removed. Ms. Court questioned what was going on post construction. Mr. Acres responded that was one of Staff's conditions. They will draft a plan to show plantings that will be added. Mr. Acres spoke with Gove Environmental, and they offered native planting suggestions. Mr. Dumont commented that when they designed the other addition, they had to add support to the first floor so they could add another story. It is not possible to add a third floor.

Ms. Gindele questioned why the fire hydrant was so far back from the sidewalk. Mr. Acres responded that the hydrant was in that location prior to the last addition. They are not proposing to modify anything along there. Mr. Britz commented that the location may have something to do with other utilities in the road.

Ms. Gindele requested clarification on where the wetland impact was. Mr. Acres responded that the only true permanent disturbance was the two slivers of the building.

Ms. Gindele questioned if the wetland stopped right at the wall of the building. Mr. Acres responded that the building would function as a retaining wall. The finished floor is at 27.8, so there will be a 5-foot retaining wall along there. They coordinated with structural engineers on that.

Vice Chairman Collins questioned if the foundation of the proposed expansion would be

able to support upper stories. Mr. Dumont responded that the front portion has been designed to take on additional floors. The area where the radiation equipment is located is not designed to take on additional floors.

Ms. Tanner questioned if they would be including a maintenance plan for the pond. Mr. Acres confirmed they would.

Ms. Court commented that a note on the plan says the value of the wetland is primarily for storm water retention, but it has other significant aspects too. Ms. Court questioned if this was the ideal spot for an expanding hospital. Mr. Acres responded that the red line is edge of the Eversource easement. It takes all the frontage away for buildable land. This corner is the only place to do the addition.

Chairman McMillan questioned if they would expand into the parking lot. Mr. Acres responded that the parking lot was in the easement, so they cannot put a building on the parking lot. Chairman McMillan questioned if they knew what plantings they would be adding. Mr. Acres responded that Gove Environmental had suggested some high bush blueberries and dogwood. Chairman McMillan questioned if they would have those details for the Planning Board. Mr. Acres confirmed that was correct. Chairman McMillan questioned what synthetic hay bales were. Mr. Acres responded that they were an erosion control measure. It has different material wrapped in filter fabric. They don't disintegrate as fast as hay. Mr. Britz questioned if they contained plastic or other harmful materials. Mr. Acres responded that he was not sure of the exact make and material but would follow up. Ms. Court commented that it was probably safe to assume that if they were designed for erosion control, then they were designed to protect the environment. Mr. Acres agreed but noted that he would verify.

Vice Chairman Collins questioned if the Staff stipulations were something that the applicants would work with Mr. Britz on. Mr. Britz confirmed that they would coordinate with him, but the Commission could provide direct input.

Ms. Vaccaro questioned if they still had trouble with flooding in that area. Mr. Larkin responded that they have not had any flooding in that area of the campus at all. Ms. Vaccaro questioned if they had flooding with any part of the campus. Mr. Larkin responded that they did not anymore.

Mr. Jankowski requested to add NOFA standards to the stipulations. They should use organic land management to maintain the property.

Ms. Tanner commented that she was concerned about what synthetic hay bales. Mr. Britz responded that they can add a stipulation that the hay bales should be natural material not synthetic. Mr. Jankowski questioned if they should just require hay bales. Mr. Britz noted that hay bales were not always the best option.

Vice Chairman Collins commented that the edge of the pond looked very manicured and questioned if it could be a more natural area that wasn't mowed with native shrubs.

Chairman McMillan commented that they can relay that to City Staff.

Ms. Gindele commented that there as quite a bit of litter around the pond, and they should add a stipulation to maintain the ponds to prevent that.

Ms. Tanner moved to recommend **approval** of the Wetland Conditional Use Permit to the Planning Board, seconded by Ms. Gindele with the following **stipulations:**

1. The applicant shall include a planting plan (to be approved by the Planning Department).
2. The applicant shall include a maintenance plan (to be approved by the Planning Department).
3. NOFA standards shall be followed and included in the maintenance plan.
4. All erosion control measures shall be made of natural materials.

Vice Chairman Collins commented that they may need to consider moving away from the main campus for future development at the hospital. It's surrounded by the easement and wetlands.

The motion passed by a 6-0-1 vote. Ms. Vaccaro abstained.

III. WETLAND CONDITIONAL USE PERMITS (NEW BUSINESS)

1. 329 Heritage Avenue
City of Portsmouth, Owner
Assessor Map 284, Lot 5

Tyler Reese and Zach Cronin from DPW and Mike Theriault and Jake Shactmen from Wright and Pearce spoke to the application. Mr. Shactmen commented that they were contracted by the City to complete the work for the pump station. There will be some impacts to the buffer. The pump station is on Heritage Ave., and it is necessary to convey the sewage in the system. The existing station is outdated and in need of replacement. The site currently has the pump station, generator, and a shed. Demolition is part of this project. There will not be any direct impacts to the prime wetland. They will be removing 220 sf of impervious surface. The pipe insulation and construction access will be temporary impacts. There will be a permanent impact with a new electrical control cabinet, a new pump station, generator, and driveway. There is also grading necessary for the project. They are proposing to put in wetland plantings where the existing station is to mitigate the impact. There will be a wetland seed mix and native shrubs along the fence line. They are shifting the new pump station over slightly. There will be some storm water improvements with crushed stone and a grass swale. That will help promote infiltration before runoff gets to the wetlands. The fence will shift 10-12 feet to left of the original site.

Ms. Tanner questioned if they were shifting everything further from the wetland. Mr. Shactmen confirmed that was correct.

Vice Chairman Collins questioned if there would be any tree removal. Mr. Shactmen responded that they would mostly be removing brush. There may some small trees but nothing of significance.

Chairman McMillan questioned if they had any invasive species out there. Mr. Theriault responded that an invasive species survey was not conducted as part of the wetland's delineation. Chairman McMillan questioned if they had seen any out there themselves. Mr. Cronin responded that they had not. Chairman McMillan questioned if this site was next to PULA land. Ms. Tanner confirmed it was.

Ms. Court questioned if the new structure was going to look significantly bigger. Mr. Cronin responded that the shed was being removed. There will only be an electrical control panel on a post with a roof.

Mr. Britz confirmed the Mark Jacobs from Gove Environmental did not mention invasive plants in his reports. Chairman McMillan questioned if there was a maintenance plan for the plantings. Mr. Cronin responded that there would be a 1-year maintenance plan to ensure the plants are established.

Ms. Tanner moved to recommend approval of the Wetland Conditional Use Permit to the Planning Board as presented, seconded by Ms. Gindele.

Ms. Tanner commented that she hoped if they found any invasive plants, then they would be removed appropriately.

The motion passed by a 6-0-1 vote. Ms. Vaccaro abstained.

2. 460 F.W Hartford Drive
Joan S. Rice Revocable Trust, Joan S. Rice Trustee, Owner
Assessor 249, Lot 17

John Rice spoke to the application. Mr. Rice adopted a rescue puppy last June and the puppy has already demonstrated that he can blast through an electric fence. The proposal is to put up a physical split rail fence with vinyl mesh in between, so the puppy can run around and remain contained. The wetland buffer runs through the house. Mr. Rice was here 2 years ago for an expansion of their deck. The Commission stipulated plantings with that approval and those are still growing.

Ms. Tanner questioned if a 4-foot fence would be tall enough. Mr. Rice responded that it should be.

Ms. Tanner commented that they should put up signage at the edge of buffer to let people know it's a wetland area. Mr. Britz confirmed he would coordinate with Mr. Rice on that.

Vice Chairman Collins questioned where the gates in the fence would be. Mr. Rice responded that there would be one on either side of the house and one at the back.

Chairman McMillan commented that the application said the fence is 3 feet from the actual wetland. Mr. Rice responded that was a guess because it was hard to determine the edge of the wetland. The fence is hugging the lawn. It should be at least 3 feet away from the edge of the wet.

Chairman McMillan questioned what the access at the back of the fence was for. Chairman McMillan questioned if they could move the fence a little further away from the wetland. Mr. Rice responded that they aligned the fence around a tree in the back and followed the lawn. Mr. Britz confirmed it was hard to tell where edge of the wet was. Chairman McMillan questioned what they would be doing on the other side of the fence. Mr. Rice responded that sometimes they go out to walk around woods, but they are not planning to use that area. Chairman McMillan questioned if there was enough room between the fence and wetland for a lawn mower to get in there. Mr. Rice responded that they aligned the fence the way it is to be able to cut the lawn. Beyond the fence there are ferns.

Ms. Court commented that the fence may provide more of a buffer than not adding one. It will keep the dog out of the wetland. Mr. Rice agreed.

Ms. Gindele moved to recommend approval of the Wetland Conditional Use Permit to the Planning Board as presented, seconded by Ms. Court.

The motion passed by a 6-0-1 vote. Ms. Vaccaro abstained.

IV. OTHER BUSINESS

1. Amendment to Conservation Commission Rules and Procedures:
   Section B. 2. Commission Membership and Officers

Chairman McMillan questioned if Mr. Jankowski wanted to provide more background. Mr. Jankowski commented that he would give more background after the motion.

Mr. Britz commented this change was proposed because when the Commission voted for Chairman and Vice Chairman it was brought to their attention that the rules say it should be conducted by a secret ballot. City Attorney Sullivan noted that was in violation with the right to know law. The proposal is to remove this from the Commission's Rules and Procedures. The only change proposed today is to remove that one section. The rules say that the Rules and Procedures may be amended by a majority vote after the change is publicly notice. They can talk about other changes, but it would need to be noticed before the Commission votes on them.

Ms. Court questioned if the Rules and Procedures document was on their iPad. Mr. Britz responded that it should be on the City's web site.

Chairman McMillan commented that there has been discussion about going through the whole document at some point.

Mr. Jankowski commented that the Commission should look at Chapter 9 1A Access to Government Records and Meetings. The first two sentences of the second paragraph is the whole point of this discussion. In 2021 when they elected the chairperson they specifically discussed if it should be a secret ballot or not. The Commission decided not to do one. This year the election was rushed through. Mr. Jankowski questioned City Attorney Sullivan on his interpretation of the rule. RSA 91A2 says no vote in open session may be taken in a secret ballot period except for town meetings, school district meetings, and elections. City Attorney Sullivan interpreted the elections to be for City Council level. Mr. Jankowski responded that he went to municipal lawyers and a city judge with this question. They explained election is open for interpretation. Mr. Jankowski did not think they had to change anything. They just need to discuss if they are going have a secret ballot or not next January. City Attorney Sullivan's interpretation is wrong.

Ms. Tanner commented that they have always had an open vote and should continue that. There is no reason to change it now. They should delete the line in the rules.

Ms. Court commented that she did not entirely understand the problem and questioned if the only thing they were discussing was the secret ballot issue. Ms. Court commented that it seemed like there was some contention around the election and she may be missing some history with the situation. Chairman McMillan commented that they have never held a secret ballot and the rule was not brought to their attention until after the election. Ms. Court questioned if the proposal was to change it. Chairman McMillan confirmed that the proposal was to remove the sentence referencing the secret ballot at the recommendation of the City Attorney. Chairman McMillan also talked to the Association Conservation Commission District's Director, and she made the recommendation to remove it as well. The public should know who is voting for who. There should be full disclosure.

Vice Chairman Collins agreed with removing it so there would not be any ambiguity around what the Commission was doing year to year. When it is time to elect officers, they should go through the procedure to make the steps clear before going straight to the motions and voting. They only do it once a year so it would be good to refresh everyone's memory.

Ms. Court questioned if there had ever been a secret ballot. Ms. Tanner responded that she had been on the Commission for 30 years. There has never been a secret ballot.

Mr. Jankowski commented that Ms. Court was not invited to the January meeting but was appointed as a member of the Conservation Commission in December. She should have been there. Mr. Britz responded that Ms. Court had not signed the book to be a member at that time. Ms. Tanner added that when a member is approved, they get a note in the mail telling them to come in and sign the book.

Ms. Gindele commented that she was proactive, so she could go to the December and January Ms. Gindele did not get a letter in the mail. Ms. Court noted that it seemed like they were talking about two different questions. Ms. Court did receive a letter, but could not comment on the timing. That is a separate question from the proposed edit.

Ms. Tanner commented that it may be an issue for new members to have a vote on officers. They have no idea what the Commission does or how it conducts business. Ms. Gindele commented that she abstained from every vote in the December meeting. Ms. Gindele did not have a strong opinion on the secret ballot edit. The election in January would have been clearer if they had all the choices presented and then decided. A motion was made immediately and then they voted. It was very fast, and Ms. Gindele felt blindsided. Ms. Tanner commented that this was the first time there have been people vying for the same position. Chairman McMillan added that she did not know there was additional interest until the night before.

Chairman McMillan commented that City Attorney Sullivan came in for a review and confirmed they did follow the procedure. There was a motion, and in the discussion, they talked about Mr. Jankowski's interest. Then the Commission voted. If that motion had failed, then another motion could have been made.

Ms. Court questioned if new members always joined in January. Ms. Tanner responded that was not the case. This year was a coincidence that there were new members and the election around the same time. Several members on the Commission renew their membership in April. It depends on when people leave and join. Mr. Britz commented that the rules say the election is in January.

Vice Chairman Collins questioned if the election happened annually. Mr. Britz confirmed that was correct.

Chairman McMillan commented that they should make a motion and then continue discussion

Ms. Court commented that she supported the change. A lack of transparency can create more of an opportunity for corruption.

Ms. Court moved to eliminate the language regarding secret ballots at the time of electing officers, seconded by Ms. Tanner.

The motion passed by a 5-1-1 vote. Ms. Vaccaro abstained, and Mr. Jankowski opposed.

Mr. Britz commented that he would send around the new flier from public works. It follows the information from Providence's lawn campaign.

Ms. Tanner commented that they have talked about putting up a sign at Home Depot and other places that sell pesticides and herbicides. There are towns that have instituted policies about not selling those products and retailers have been advertising that they don't sell products harmful to the environment.

Mr. Jankowski commented that one of the reasons he got on the Conservation Commission was to push an organic lawn care education program. City Council passed an initiative to do organic lawn care and asked the Commission to make a recommendation. Mr. Jankowski has been following up with Mr. Goetz this. They have not done enough to educate the public on the

dangers of this. They need to encourage people to use organic lawn care. Chairman McMillan commented that they emailed the draft of the flier. Mr. Jankowski commented that the successful part of the Providence program was for people to pledge following an organic land program and display a sign on their lawn. That pressures people to talk about it and start a movement. It would be good to educate people to hire landscapers who are accredited through NOFA. There are a number of accredited landscapers out there. Ms. Court agreed it would be good to educate people on land care management. Towns that take a leadership role in organic land management set a good example. Ms. Court was in a regenerative gardening group and they work to educate each other.

Mr. Britz commented that the Providence program was a grant program. They will send out the DPW flier that has the information from that program in it. They can look at a grant program, but after talking to Providence they found only a few people actually put signs up. They need neighborhoods to talk with each other. It is not fair to say the City is not doing its job. The City can't make people do organic land care unless they pass a law. They can only do so much as a City government. It is important to have groups in the community like the regenerative gardening group and other groups for people to participate in as a way to get things going. There needs to be meaningful work to encourage people to do things. It is important to look at ways to build support instead of pointing fingers of who is not doing enough. The Commission works to mitigate impacts and adapt to changes in the law and environment. They need to do a lot of work there.

Ms. Court commented that they should be working with the schools on education and programming. Ms. Tanner commented that the High School had an Eco Club she could connect with. Ms. Tanner was also part of the Portsmouth Climate Solutions Group and they meet every Wednesday at 7 p.m. If people were looking at other ways to get involved, then she could send them the meeting link. Ms. Gindele agreed connecting with the schools was a good idea. Mr. Britz commented that there were a lot of different efforts at the school already. Ms. Court would have to talk to the teachers and principals there to find out what they were doing.

Ms. Tanner commented that this all fell under the umbrella of how to build support on climate issues, and how to get people involved. Chairman McMillan commented that they could work further on this in a subcommittee. Mr. Britz noted that it doesn't' just have to be the City setting this up. Ms. Tanner agreed that it did not have to be only the Conservation Commission. There are plenty of other groups in the City as well. Chairman McMillan commented that Mr. Jankowski should check in with Mr. Goetz again and they can figure out a subcommittee or two.

Chairman McMillan commented that she and Mr. Britz were contacted by the UNH Cooperative Extension and CAWS. They are looking for towns to participate in a coastal flood risk guidance program. It's a grant project, and Chairman McMillan noted she would bring more information back to the Commission at a future meeting.

V. ADJOURNMENT

Ms. Tanner moved to adjourn at 5:39 p.m., seconded by Ms. Gindele. The motion passed unanimously.

Respectfully submitted,

Secretary for the Conservation Commission

SUBJECT: Wetland Buffer Conditional Use Request
Granite State Convenience
Proposed Retail Motor Fuel Outlet
2255 Lafayette Road
Map 272 Lot 3

Dear Members of the Portsmouth Conservation Commission:

On behalf of Granite State Convenience **Greenman-Pedersen, Inc. (GPI)** is hereby requesting a Wetland Buffer Conditional Use Permit from the Portsmouth Conservation Commission for the following:

- **Article 10.1016** to allow development within the wetland buffer zone

The project site consists of one parcel identified as Map 272 Lot 3 which totals approximately 2.571 acres. The site is bordered by Lafayette Road (Route 1) to the northwest, commercial properties to the northeast and southwest and wooded areas containing wetlands to the south and southeast. The site is previously developed and contains a Burger King restaurant with drive-thru, which is currently not in use, and associated paved parking lot and driveways to Lafayette Road. The majority of the lot is paved and on-site drainage structures are limited to a single catch basin in the landscaped area northwest of the existing building which had no visible pipe outlet at the time of survey. Granite State Convenience is proposing to raze the existing restaurant and construct a retail motor fuel outlet consisting of a 5,555 sf convenience store/sandwich shop with drive-through service and a fueling canopy with 5 retail fuel dispenser islands (10 fueling locations), and associated paved driveways and parking.

This request is made in accordance with the provisions contained in Article 10.1017.50 of the City of Portsmouth Zoning Ordinance. GPI is providing the following information in support of the criteria listed in that Section:

Any proposed development, other than installation of utilities within a right-of-way, shall comply with all of the following criteria:

(1) The land is reasonably suited to the use, activity or alteration.

The land has previously been disturbed for a similar use.

The proposed development will consist of razing the existing fast food restaurant and removing 59,940 sf of impervious pavement and concrete, and constructing a development with a smaller development footprint. In addition, approximately 9,000 sf of current impervious area will be restored to its natural state with the proposed development.

The majority of the wetland buffer disturbance area is within the buffer to a swale between the site and the neighboring property to the east. This swale conveys water from the NH DOT drainage system.

(2) There is no alternative location outside the wetland buffer that is feasible and reasonable for the proposed use, activity or alteration.

The site has been designed in a way that minimizes activity in the wetland buffer area. The total impervious area within the wetland buffer will be decreased by over 9,000 sf between the existing and proposed use. The distance between the developed area will increase from 10 ft to the dumpster and 14 ft to paved surfaces in the existing condition to 25 ft in the proposed condition.

(3) There will be no adverse impact on the wetland functional values of the site or surrounding properties;

As stated in criterion 3, the proposed development will decrease impervious cover within the wetland buffer area and increase wetland buffer widths. The proposed development also includes a comprehensive stormwater management system which will decrease the pollutant load to the wetland by installing deep sump catch basins with "Eliminator" oil hoods, first defense hydrodynamic separator unit, and an oil/water separator tank.

(4) Alteration of the natural vegetative state or managed woodland will occur only to the extent necessary to achieve construction goals; and

There will be no alteration to natural vegetative state in the wetland buffer as all work will occur in previously disturbed areas.

(5) The proposal is the alternative with the least adverse impact to areas and environments under the jurisdiction of this Section.

The proposed site work has been designed to have the least adverse impact to the wetland buffer. Per Conservation Commission comments on the Preliminary Site Plan, the underground storage tanks have been shifted to the west side of the lot furthest away from the wetland and outside the wetland buffer, the loading zone has been relocated to the westerly side of the property so the southern edge of the development can shift further out of the wetland buffer, and parking spaces have been eliminated on the eastern side of the development. In addition, as recommended by the Conservation Commission, a depressed area has been created along the northeast of the site to collect and filter snowmelt from snow storage to snowmelt from directly entering the wetland.

(6) Any area within the vegetated buffer strip will be returned to a natural state to extent feasible.

A portion of the previously disturbed area within the wetland buffer will be restored to a natural state as a part of this project.

If you have any questions or need additional information, please feel free to contact me directly at 603-374-7906 or by email at nduquette@gpinet.com

2) ALL DEMOLITION ACTIVITIES ARE TO BE PERFORMED IN STRICT ADHERENCE TO ALL FEDERAL, STATE AND LOCAL REGULATIONS. CONTRACTOR TO INSTALL EROSION CONTROL DEVICES IN ACCORDANCE WITH EROSION AND SEDIMENT CONTROL PLAN PRIOR TO BEGINNING DEMOLITION ACTIVITIES.
3) PROCEED WITH DEMOLITION IN A SYSTEMATIC MANNER, FROM THE TOP OF THE STRUCTURE(S) TO THE GROUND.
4) DEMOLISH CONCRETE IN ALL SECTIONS
5) BREAK UP CONCRETE SLABS-ON-GRADE, UNLESS OTHERWISE DIRECTED BY THE CONSTRUCTION MANAGER.
6) CONDUCT ALL DEMOLITION OPERATIONS IN A MANNER THAT WILL PREVENT INJURY, DAMAGE TO STRUCTURES, ADJACENT BUILDINGS AND ALL PERSONS.
7) REFRAIN FROM USING EXPLOSIVES WITHOUT PRIOR WRITTEN CONSENT OF THE DEVELOPER AND APPLICABLE GOVERNMENTAL AUTHORITIES.
8) CONDUCT DEMOLITION SERVICES IN SUCH A MANNER TO INSURE MINIMUM INTERFERENCE WITH ROADS, STREETS, WALKS AND OTHER ADJACENT FACILITIES. DO NOT CLOSE OR OBSTRUCT STREETS, WALKS OR OTHER OCCUPIED FACILITIES WITHOUT PRIOR WRITTEN PERMISSION OF THE DEVELOPER AND APPLICABLE GOVERNMENTAL AUTHORITIES. PROVIDE ALTERNATIVE ROUTES AROUND CLOSED OR OBSTRUCTED TRAFFIC WAYS IF REQUIRED BY APPLICABLE GOVERNMENTAL REGULATIONS.
9) USE WATERING, TEMPORARY ENCLOSURES AND OTHER SUITABLE METHODS, AS NECESSARY TO LIMIT THE AMOUNT OF DUST AND DIRT RISING AND SCATTERING IN THE AIR. CLEAN ADJACENT STRUCTURE AND IMPROVEMENTS OF ALL DUST AND DEBRIS CAUSED BY THE DEMOLITION OPERATIONS. RETURN ALL ADJACENT AREAS TO THE CONDITIONS EXISTING PRIOR TO THE START OF WORK.
10) ACCOMPLISH AND PERFORM THE DEMOLITION IN SUCH A MANNER AS TO PREVENT THE UNAUTHORIZED ENTRY OF PERSONS AT ANY TIME.
11) COMPLETELY FILL BELOW GRADE AREAS AND VOIDS RESULTING FROM THE DEMOLITION OF STRUCTURES AND FOUNDATIONS WITH SOIL MATERIALS CONSISTING OF STONE, GRAVEL AND SAND, FREE FROM DEBRIS, TRASH, FROZEN MATERIALS, ROOTS AND OTHER ORGANIC MATTER. STONES USED WILL NOT BE LARGER THAT 6 INCHES IN DIMENSION. MATERIAL FROM DEMOLITION MAY NOT BE USED AS FILL. PRIOR TO PLACEMENT OF FILL MATERIALS, UNDERTAKE ALL NECESSARY ACTION IN ORDER TO INSURE THAT AREAS TO BE FILLED ARE FREE OF STANDING WATER, FROZEN MATERIAL, TRASH, DEBRIS. PLACE FILL MATERIALS LAYERS NOT EXCEEDING 6 INCHES IN LOOSE DEPTH AND COMPACT EACH LAYER AT PLACEMENT TO 95% OPTIMUM DENSITY, GRADE SURFACE TO MEET ADJACENT CONTOURS AND TO PROVIDE SURFACE DRAINAGE.
12) REMOVE FROM THE DESIGNATED SITE, AT THE EARLIEST POSSIBLE TIME, ALL DEBRIS RUBBISH, SALVAGEABLE ITEMS, HAZARDOUS AND COMBUSTIBLE SERVICES. REMOVED MATERIALS MAY NOT BE STORED, SOLD OR BURNED ON SITE. MARK FOR POSITION ALL UTILITY DRAINAGE AND SANITARY LINES AND PROTECT ALL ACTIVE LINES. CLEARLY IDENTIFY BEFORE THE COMMENCEMENT OF DEMOLITION SERVICES THE REQUIRED INTERRUPTION OF ACTIVE SYSTEMS THAT MAY AFFECT OTHER PARTIES, AND NOTIFY ALL APPLICABLE UTILITY COMPANIES TO INSURE THE CONTINUATION OF SERVICE.
14) PROTECT EXISTING DRAINAGE SYSTEM(S) AS NECESSARY TO PREVENT SEDIMENT FROM ENTERING DURING CONSTRUCTION. SEE DETAIL SHEETS FOR EROSION CONTROL DEVICES.
15) ALL WORK WITHIN ROADWAY RIGHT-OF-WAYS TO CONFORM TO CITY STANDARDS.
16) THE LIMITS OF WORK SHALL BE CLEARLY MARKED IN THE FIELD PRIOR TO THE START OF CONSTRUCTION OR SITE CLEARING.
17) IT SHALL BE THE CONTRACTORS RESPONSIBILITY TO NOTIFY DIG SAFE (DIAL 811) 72 HOURS PRIOR TO ANY EXCAVATION ON THIS SITE. CONTRACTOR SHALL ALSO NOTIFY LOCAL WATER DEPARTMENT TO MARK OUT THEIR UTILITIES.
18) NOTES ON THIS PLAN THAT READ "TBR" REPRESENT FEATURES TO BE REMOVED. ANY FEATURES NOT LABELED "TBR" OR "TO BE REMOVED" SHALL BE CONSIDERED EXISTING TO REMAIN.
19) EXISTING WATER SERVICE LOCATION IS UNKNOWN. CONTRACTOR TO LOCATE AND DISCONTINUE SERVICE AT THE MAIN.

SEE EROSION & SEDIMENT CONTROL PLAN FOR CONSTRUCTION SEQUENCE, TEMPORARY EROSION CONTROL MEASURES, AND LOCATION OF EROSION CONTROL DEVICES. SEE LANDSCAPE PLAN FOR LIMITS OF CLEARING.

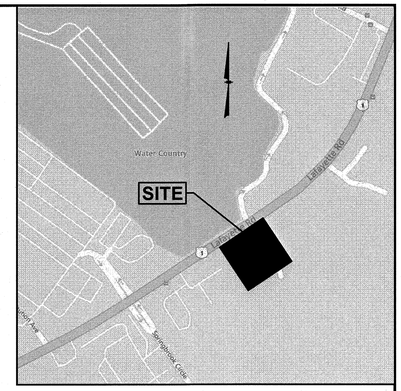
CONSTRUCTION SEQUENCE:

1) SEDIMENT AND EROSION CONTROL MEASURES SHALL BE INSTALLED PRIOR TO ANY ON–SITE CONSTRUCTION AS SHOWN. ADDITIONAL TEMPORARY SEDIMENT AND EROSION CONTROL MEASURES SHALL BE INSTALLED AS SOON AS PRACTICAL.
2) REMOVE AND STOCKPILE SOIL AS REQUIRED. STOCKPILE SHALL BE SURROUNDED WITH HAYBALES TO PREVENT EROSION.
3) CONSTRUCT DRIVEWAYS AND PERFORM SITE GRADING.
4) INSTALL UNDERGROUND UTILITIES & DRAINAGE.
5) BEGIN TEMPORARY AND PERMANENT SEEDING AND MULCHING. ALL CUT AND FILL SLOPES SHALL BE SEEDED OR MULCHED IMMEDIATELY AFTER THEIR CONSTRUCTION.
6) DAILY, OR AS REQUIRED, CONSTRUCT, INSPECT, AND IF NECESSARY, RECONSTRUCT TEMPORARY BERMS, DRAINS, DITCHES, SILT FENCES, HAYBALES AND SEDIMENT TRAPS INCLUDING MULCHING AND SEEDING.
7) BEGIN EXCAVATION FOR AND CONSTRUCTION OF BUILDINGS.
8) FINISH PAVING ALL DRIVES AND PARKING AREAS. CLEAN ALL DRAINAGE STRUCTURES.
9) COMPLETE PERMANENT SEEDING AND LANDSCAPING.
10) AFTER GRASS HAS BEEN FULLY GERMINATED IN ALL SEEDED AREAS, REMOVE ALL TEMPORARY EROSION CONTROL MEASURES.

WINTER STABILIZATION NOTES:

MAINTENANCE REQUIREMENTS:
MAINTENANCE MEASURES SHOULD CONTINUE AS NEEDED THROUGHOUT CONSTRUCTION, INCLUDING THE OVER–WINTER PERIOD. AFTER EACH RAINFALL, SNOWSTORM, OR PERIOD OF THAWING AND RUNOFF, THE SITE CONTRACTOR SHOULD CONDUCT AN INSPECTION OF ALL INSTALLED EROSION CONTROL MEASURES AND PERFORM REPAIRS AS NEEDED TO INSURE THEIR CONTINUING FUNCTION. FOR ANY AREA STABILIZED BY TEMPORARY OR PERMANENT SEEDING PRIOR TO THE ONSET OF THE WINTER SEASON, THE CONTRACTOR SHOULD CONDUCT AN INSPECTION IN THE SPRING TO ASCERTAIN THE CONDITION OF VEGETATION COVER, AND REPAIR ANY DAMAGE AREAS OR BARE SPOTS AND RESEED AS REQUIRED TO ACHIEVE AN ESTABLISHED VEGETATIVE COVER (AT LEAST 85% OF AREA VEGETATED WITH HEALTHY, VIGOROUS GROWTH).
SPECIFICATIONS:
TO ADEQUATELY PROTECT WATER QUALITY DURING COLD WEATHER AND DURING SPRING RUNOFF, THE FOLLOWING STABILIZATION TECHNIQUES SHOULD BE EMPLOYED DURING THE PERIOD FROM OCTOBER 15TH THROUGH MAY 15TH.
1) THE AREA OF EXPOSED, UNSTABILIZED SOIL SHOULD BE LIMITED TO ONE ACRE AND SHOULD BE PROTECTED AGAINST EROSION BY THE METHODS DESCRIBED IN THIS SECTION PRIOR TO ANY THAW OR SPRING MELT EVENT. SUBJECT TO APPLICABLE REGULATIONS, THE ALLOWABLE AREA OF EXPOSED SOIL MAY BE INCREASED IF ACTIVITIES ARE CONDUCTED ACCORDING TO A WINTER CONSTRUCTION PLAN, DEVELOPED BY A PROFESSIONAL ENGINEER LICENSED TO PRACTICE IN THE STATE OF NEW HAMPSHIRE OR A CERTIFIED PROFESSIONAL IN EROSION AND SEDIMENT CONTROL AS CERTIFIED BY THE CSPESC COUNCIL OF ENVIROCERT INTERNATIONAL, INC.
2) STABILIZATION AS FOLLOWS SHOULD BE COMPLETED WITHIN A DAY OF ESTABLISHING THE GRADE THAT IS FINAL OR THAT OTHERWISE WILL EXIST FOR MORE THAN 5 DAYS:
A. ALL PROPOSED VEGETATED AREAS HAVING A SLOPE OF LESS THAN 15% WHICH DO NOT EXHIBIT A MINIMUM OF 85% VEGETATIVE GROWTH BY OCTOBER 15TH, OR WHICH ARE DISTURBED AFTER OCTOBER 15TH, SHOULD BE SEEDED AND COVERED WITH 3 TO 4 TONS OF HAY OR STRAW MULCH PER ACRED SECURED WITH ANCHORED NETTING, OR 2 INCHES OF EROSION CONTROL MIX (SEE DESCRIPTION OF EROSION CONTROL MIX BERMS FOR MATERIAL SPECIFICATION).
B. ALL PROPOSED VEGETATED AREAS HAVING A SLOPE OF GREATER OOTHAN 15% WHICH DO NOT EXHIBIT A MINIMUM OF 85% VEGETATIVE GROWTH BY OCTOBER 15TH, OR WHICH ARE DISTURBED AFTER OCTOBER 15TH, SHOULD BE SEEDED AND COVERED WITH A PROPERLY INSTALLED AND ANCHORED EROSION CONTROL BLANKET OR WITH A MINIMUM 4 INCH THICKNESS OF EROSION CONTROL MIX, UNLESS OTHERWISE SPECIFIED BY THE MANUFACTURER. NOTE THAT COMPOST BLANKETS SHOULD NOT EXCEED 2 INCHES IN THICKNESS OR THEY MAY OVERHEAT.
3) ALL STONE–COVERED SLOPES MUST BE CONSTRUCTED AND STABILIZED BY OCTOBER 15.
4) INSTALLATION OF ANCHORED HAY MULCH OR EROSION CONTROL MIX SHOULD NOT OCCUR OVER SNOW OF GREATER THAN ONE INCH IN DEPTH.
5) ALL MULCH APPLIED DURING WINTER SHOULD BE ANCHORED (E.G., BY NETTING, TRACKING, WOOD CELLULOSE FIBER).
6) STOCKPILES OF SOIL MATERIALS SHOULD BE MULCHED FOR OVER WINTER PROTECTION WITH HAY OR STRAW AT TWICE THE NORMAL RATE OR WITH A FOUR–INCH LAYER OF EROSION CONTROL MIX. MULCHING SHOULD BE DONE WITHIN 24 HOURS OF STOCKING, AND RE–ESTABLISHED PRIOR TO ANY RAINFALL OR SNOWFALL. NO SOIL STOCKPILE SHOULD BE PLACED (EVEN COVERED WITH MULCH) WITHIN 100 FEET FROM ANY WETLAND OR OTHER WATER RESOURCE AREA.
7) FROZEN MATERIALS, (E.G., FROST LAYER THAT IS REMOVED DURING WINTER CONSTRUCTION), SHOULD BE STOCKPILED SEPARATELY AND IN A LOCATION THAT IS AWAY FROM ANY AREA NEEDING TO BE PROTECTED. STOCKPILES OF FROZEN MATERIAL CAN MELT IN THE SPRING AND BECOME UNWORKABLE AND DIFFICULT TO TRANSPORT DUE TO THE HIGH MOISTURE CONTENT IN THE SOIL.
8) INSTALLATION OF EROSION CONTROL BLANKETS SHOULD NOT OCCUR OVER SNOW OF GREATER THAN ONE INCH IN DEPTH OR ON FROZEN GROUND.
9) ALL GRASS–LINED DITCHES AND CHANNELS SHOULD BE CONSTRUCTED AND STABILIZED BY SEPTEMBER 1. ALL DITCHES OR SWALES WHICH DO NOT EXHIBIT A MINIMUM OF 85% VEGETATIVE GROWTH BY OCTOBER 15TH, OR WHICH ARE DISTURBED AFTER OCTOBER 15TH, SHOULD BE STABILIZED TEMPORARILY WITH STONE OR EROSION CONTROL BLANKETS APPROPRIATE FOR THE DESIGN FLOW CONDITIONS, AS DETERMINED BY A QUALIFIED PROFESSIONAL ENGINEER OR A CERTIFIED PROFESSIONAL IN EROSION AND SEDIMENT CONTROL AS CERTIFIED BY THE CSPESC COUNCIL OF ENVIROCERT INTERNATIONAL, INC. IF A STONE LINING IS NECESSARY, THE CONTRACTOR MAY NEED TO RE–GRADE THE DITCH AS REQUIRED TO PROVIDE ADEQUATE CROSS–SECTION AFTER ALLOWING FOR PLACEMENT OF THE STONE.
10) ALL STONE–LINED DITCHES AND CHANNELS MUST BE CONSTRUCTED AND STABILIZED BY OCTOBER 15.
11) AFTER OCTOBER 15, INCOMPLETE ROAD OR PARKING SURFACES, WHERE WORK HAS STOPPED FOR THE WINTER SEASON, SHALL BE PROTECTED WITH A MINIMUM OF 3 INCHES OF CRUSHED GRAVEL PER NHDOT ITEM 304.3.
12) SEDIMENT BARRIERS THAT ARE INSTALLED DURING FROZEN CONDITIONS SHOULD CONSIST OF EROSION CONTROL MIX BERMS, OR CONTINUOUS CONTAINED BERMS. SILT FENCES AND HAY BALES SHOULD NOT BE INSTALLED WHEN FROZEN CONDITIONS PREVENT PROPER EMBEDMENT OF THESE BARRIERS.



LOCATION MAP
(NOT TO SCALE)

EROSION CONTROL NOTES:

1) THE EROSION CONTROL PROCEDURES SHALL CONFORM TO THE NH STORMWATER MANUAL, VOLUME 3, EROSION & SEDIMENT CONTROLS DURING CONSTRUCTION, DECEMBER 2008, OR LATEST EDITION.
2) DURING CONSTRUCTION AND THEREAFTER, EROSION CONTROL MEASURES ARE TO BE IMPLEMENTED AS NOTED: THE SMALLEST PRACTICAL AREA OF LAND SHOULD BE EXPOSED AT ANY ONE TIME DURING DEVELOPMENT. WHEN LAND IS EXPOSED DURING DEVELOPMENT, THE EXPOSURE SHOULD BE KEPT TO THE SHORTEST PRACTICAL PERIOD OF TIME AS APPROVED BY THE ENGINEER. LAND SHOULD NOT BE LEFT EXPOSED DURING THE WINTER MONTHS.
3) LIMIT OF MAXIMUM AREA OF EXPOSED SOIL AT ANY ONE TIME TO LESS THAN 5 ACRES. THE EXPOSED AREA THAT IS BEING ACTIVELY WORKED DURING WINTER IS TO BE LESS THAN 3 ACRES DURING THE WINTER SEASON.
4) ALL PERMANENT STORM WATER STRUCTURES SHALL BE STABILIZED PRIOR TO DIRECTING FLOW INTO THEM. AN AREA SHALL BE CONSIDERED STABLE IF ONE OF THE FOLLOWING HAS OCCURED:
A) BASE COURSE GRAVELS HAVE BEEN INSTALLED IN AREAS TO BE PAVED.
B) A MINIMUM OF 85 PERCENT VEGETATED GROWTH HAS BEEN ESTABLISHED.
C) A MINIMUM OF 3 INCHES OF NON–EROSIVE MATERIAL SUCH AS STONE OR RIP–RAP HAS BEEN INSTALLED.
D) OR, EROSION CONTROL BLANKETS HAVE BEEN PROPERLY INSTALLED.
5) SILT FENCE SHALL BE INSTALLED AND MAINTAINED DURING AND AFTER DEVELOPMENT TO REMOVE SEDIMENT FROM RUNOFF WATER AND FROM LAND UNDERGOING DEVELOPMENT. WHERE POSSIBLE, NATURAL DRAINAGE WAYS SHOULD BE UTILIZED AND LEFT OPEN TO REMOVE EXCESS SURFACE WATER. SILT FENCE TO BE MAINTAINED AND CLEANED UNTIL ALL SLOPES HAVE A HEALTHY STAND OF GRASS.
6) ALL DISTURBED AREAS AND SIDE SLOPES WHICH ARE FINISHED GRADED, WITH NO FURTHER CONSTRUCTION TO TAKE PLACE, SHALL BE LOAMED AND SEEDED WITHIN 72 HOURS AFTER FINAL GRADING. A MINIMUM OF 4" OF LOAM SHALL BE INSTALLED WITH NOT LESS THAN ONE POUND OF SEED PER 50 SQUARE YARDS OF AREA. THE SEED MIX SHALL BE AS DESIGNATED BELOW.
7) ANY DISTURBED AREAS WHICH ARE TO BE LEFT TEMPORARILY, AND WHICH WILL BE REGRADED LATER DURING CONSTRUCTION SHALL BE MACHINE HAY MULCHED AND SEEDED WITH RYE GRASS TO PREVENT EROSION. THE MAXIMUM LENGTH OF TIME FOR THE EXPOSURE OF DISTURBED SOILS SHALL BE 45 DAYS. HAY OR STRAW MULCH SHALL BE APPLIED TO ALL FRESHLY SEEDED AREAS AT THE RATE OF 2 TONS PER ACRE. BALES SHALL BE UNSPOILED, AIR DRIED, AND FREE FROM WEED, SEEDS AND ANY COARSE MATERIAL.
8) DURING GRADING OPERATIONS INSTALL HAY BALE BARRIERS ALONG TOE OF SLOPE OF FILL AREAS WHERE SHOWN. BARRIERS ARE TO BE MAINTAINED UNTIL DISTURBED AREAS ARE PAVED OR GRASSED.
9) THE FILL MATERIAL SHALL BE OF APPROVED SOIL TYPE FREE FROM STUMPS, ROOTS, WOOD, ETC. TO BE PLACED IN 12" LIFTS OR AS SPECIFIED. BULLDOZERS, TRUCKS, TRACTORS, OR ROLLERS MAY BE USED FOR COMPACTION BY ROUTING THE EQUIPMENT TO ALL AREAS OR EACH LAYER.
10) AVOID THE USE OF FUTURE OPEN SPACES (LOAM & SEED) WHEREVER POSSIBLE DURING CONSTRUCTION. CONSTRUCTION TRAFFIC SHALL USE THE ROADBEDS OF FUTURE ROADS.

TEMPORARY EROSION CONTROL MEASURES:

1) THE SMALLEST PRACTICAL AREA OF LAND SHALL BE EXPOSED AT ANY ONE TIME.
2) HAY BALE BARRIERS AND SEDIMENT CONTROL FENCE SHALL BE INSTALLED AS REQUIRED. BARRIERS AND FENCE ARE TO BE MAINTAINED AND CLEANED UNTIL ALL SLOPES HAVE A HEALTHY STAND OF GRASS.
3) BALED HAY AND MULCH SHALL BE MOWINGS OF ACCEPTABLE HERBACEOUS GROWTH; FREE FROM NOXIOUS WEEDS OR WOODY STEMS, AND SHALL BE DRY. NO SALT HAY SHALL BE USED.
4) FILL MATERIAL SHALL BE FREE FROM STUMPS, WOOD, ROOTS, ETC.
5) STOCKPILED MATERIALS SHALL BE PLACED ONLY IN AREAS SHOWN ON THE PLANS. STOCKPILES SHALL BE PROTECTED BY HAY BALE BARRIERS AND SEEDED TO PREVENT EROSION. THESE MEASURES SHALL REMAIN UNTIL ALL MATERIAL HAS BEEN PLACED OR DISPOSED OFF SITE.
6) ALL DISTURBED AREAS SHALL BE LOAMED AND SEEDED. A MINIMUM OF 4 INCHES OF LOAM SHALL BE INSTALLED WITH NOT LESS THAN ONE POUND OF SEED PER 50 SQUARE YARDS OF AREA.
7) SEED MIX SHALL BE EQUAL PARTS OF RED FESCUE (CREEPING), KENTUCKY BLUE GRASS, REDTOP, PERENNIAL RYEGRASS.
8) AFTER ALL DISTURBED AREAS HAVE BEEN STABILIZED, THE TEMPORARY EROSION CONTROL MEASURES ARE TO BE REMOVED.
9) PAVED ROADWAYS MUST BE KEPT CLEAN AT ALL TIMES.
10) ALL CATCH BASIN INLETS WILL BE PROTECTED WITH INLET PROTECTION.
11) ALL STORM DRAINAGE OUTLETS WILL BE STABILIZED AND CLEANED AS REQUIRED, BEFORE THE DISCHARGE POINTS BECOME OPERATIONAL.
12) ALL DEWATERING OPERATIONS MUST DISCHARGE DIRECTLY INTO A SEDIMENT FILTER AREA.
13) TO PREVENT TRACKING OF SEDIMENT ONTO THE EXISTING ROADS, ALL CONSTRUCTION TRAFFIC CAN ONLY EXIT THE SITE OVER THE CONSTRUCTION ENTRANCES SHOWN ON THIS PLAN.

CONSTRUCTION SPECIFICATIONS:

PREPARE BEDDING:

BACKFILL MATERIAL AROUND THE END SECTION MAY BE THE SAME AS THE MATERIAL AROUND THE PIPE, PLACE A FEW INCHES OF BACKFILL MATERIAL IN THE TRENCH OR DITCH WHERE THE END SECTION WILL BE PLACED. COMPACT AND CONTOUR THIS BEDDING MATERIAL TO GENERALLY MATCH THE END SECTION, EXCAVATE AN AREA IN THE BEDDING WHERE TOE TROUGH WILL SEAT SO THAT THE END SECTION WILL BE LEVEL WITH THE BOTTOM OF THE TRENCH OR DITCH IN THE FINISHED INSTALLATION.

PLACE END SECTION OF PIPE:

OPEN THE END SECTION COLLAR AND SEAT IT OVER THE TWO PIPE CONNECTIONS. ONCE THE END SECTION IS POSITIONED, CHECK TO MAKE SURE THAT THE INVERT OF THE END SECTION MATCHES THE INVERT OF THE PIPE AND THAT THE END SECTION IS LEVEL WITH THE TRENCH OR DITCH BOTTOM.

SECURE THE END SECTION:

SLIP THE STAINLESS STEEL ROD THROUGH THE PRE-DRILLED HOLES AT THE TOP OF THE COLLAR. THE ROD SHOULD BE BETWEEN THE CROWNS OF THE TWO PIPE CONNECTIONS. PLACE A WASHER ON EITHER END OF THE ROD. PLACE A NUT ON EITHER END OF THE ROD AND TIGHTEN WITH A WRENCH.

SECURE THE TOE TROUGH:

TO PREVENT WASHOUTS FROM HIGH VELOCITY FLOW, IT IS RECOMMENDED THAT THE TROUGH BE SECURED WITH CONCRETE. POUR CONCRETE IN THE TROUGH UP TO THE LEVEL OF THE TRENCH OR DITCH BOTTOM AND ALONG THE ENTIRE LENGTH OF THE TROUGH.

FINISH BACKFILL:

SHOVEL BACKFILL AROUND THE END SECTION IN 6 TO 9 INCH LAYERS EQUALLY ON BOTH SIDES, KNIFING IT TO ELIMINATE VOIDS. TAMP WITH A SMALL-FACED COMPACTOR OR OTHER EQUIPMENT SUITABLE FOR SMALL AREAS. CONTINUE PLACING, KNIFING, AND COMPACTING BACKFILL LAYERS TO THE TOP OF THE END SECTION TO SEAT IT WELL INTO THE BACKFILL.

Project Description

The project includes the development of a two-story, 2,343 SF, single family dwelling at 70 Pleasant Point Drive. The existing Tax Map 207 Lot 15 is approximately .642 acres and currently contains a single-story residence with a shed and water access. The site is within the Single Residence B (SRB) Zone, partially located within the extended flood hazard area, and is adjacent to the Piscataqua River.

The proposed project is to construct a two-story residential dwelling. Associated improvements include but are not limited to access, grading, utilities, stormwater management system, and landscaping. The project proposes a 2,605 SF building footprint and total 3,546 SF of impervious area upon the property and approximately 19,907 SF of disturbance to facilitate the development.

The development is proposed outside the Wetland but within the 100' Wetland Buffer located south of the development. The project will be undergoing additional review by Portsmouth Conservation Commission, and the New Hampshire Department of Environmental Services, for both Wetland and Shoreland Impacts.

Re: 70 Pleasant Point Drive Portsmouth NH

Dear Peter:

This letter is intended to address recommendations for invasive species removal and native plant restoration along the shorefront of 70 Pleasant Point Drive. The site is .65 acres with an existing, non-conforming, single family residence that is planned to be torn down and rebuilt. Accompanying the house construction project is the conversion of existing impervious driveway and hardscape surfaces into new permeable driveway and outdoor patio spaces. The project also includes introduction of native plantings along the shoreline and around the home, as well as the transition of a large lawn area into a native, low maintenance grass and ground cover mix mix.

The property sits on the Piscataqua River with almost 336 feet of frontage. A majority of the site is a level plateau that perches above the shoreline. A majority of the site sits within the 100ft buffer and the 250ft NH DES Shoreland protection zone. There is a drastic slope along the southerly shore frontage from the relatively flat part of the site to the tide line. This slope is covered in a mix of ornamental, native and invasive plantings.

Acting as good stewards the owners have asked that we put together an invasive species analysis and plan for removal and replacement. Enclosed is an outline of our findings as well as recommendations for new native plants to be installed.

Respectfully Submitted,

Eric R. Buck

Eric R. Buck, PLA, ASLA
Owner/ Landscape Architect

Our list of existing invasive plant species can be found below. We propose removing invasive species by low-impact manual hand pulling methods whenever possible. During our inventory a majority of the invasives we found had stems less than 1" in diameter. This means they likely have minimal root mass in the slope. However, should larger plants be discovered during the removal process, we recommend a cut & dab herbicide application by licensed applicators. This method of removal for larger specimens will greatly reduce the chance of erosion along the shoreline. All existing erosion shall be stabilized and any soil disturbed during planting will be seeded with native conservation/ wetlands mix.

Likely Invasive species identified:

- *Celastrus orbiculatus,* Asiatic Bittersweet
- *Fallopia japonica,* Japanese Knotweed
- *Rosa multiflora,* Multiflora Rose
- *Deutzia scabra*, Fuzzy Deutzia

Recommended Native Plantings:

- *Amelanchier laevis* Shadblow Serviceberry
- *Clethra alnifolia* Summersweet
- *Cornus amonum* Silky Dogwood
- *Cornus racemosa* Gray Dogwood
- *Ilex vertilicillata* Winterberry
- *Rosa virginiana* Virginia Rose

Whenever possible native plantings should be installed via a live staking method, rather than as field grown plant material with a root ball. This will avoid added erosion on the slope caused by excavation of the soil to place the plants. Should the existing slope not have sufficient soil for live staking method to take place, erosion control tubes filled with growing medium are to be staked to the slope and live staking should be placed into the soil socks. Enclosed are specifications for recommended soil medium and erosion sock type and method.

Below are images of the area that was inventoried.

SUSTAINABILITY BENEFITS

Our compost-based GreenLoxx systems are designed for environmental benefits and can have a significant impact on your project's sustainability.

Vegetated Wall & Slope Benefits[1]

- Reduction of the Urban Heat Island Effect
- Improved Exterior Air Quality
- Noise Reduction
- Increased Green Space, Biodiversity and Habitat
- Forage for Native Pollinators
- Urban Agriculture
- On-Site Wastewater Treatment
- Improved Health and Well-Being
- Aesthetic Improvements
- Local Job Creation

Carbon Footprint Reduction[2]

There are three key ways in which compost-based GreenLoxx systems can significantly lower a site's carbon footprint:

- Methane avoidance resulting from diverting organics from landfills
- Carbon sequestration by permanent vegetation
- Carbon sequestration by storing carbon in the soil

This GreenLoxx MSE project on the Chattahoochee River has the following impact:

- 656,000 lbs of Organics Diverted from Landfills
- 1,148,000 lbs of CO_2e Methane Avoidance
- 205 lbs of CO_2 Sequestered in Vegetation
- 110,700 lbs of CO_2 Sequestered in Soil

This is the equivalent of offsetting the greenhouse gas emissions of 121 passenger vehicles driven for one year.[2]

Treating Stormwater Runoff[2]

With approximately 50% organic matter, a high porosity, and high relative surface area, compost has the ability to absorb significant volumes of water.

This GreenLoxx MSE project, restoring a bluff on Lake Michigan, not only provides habitat and beauty, it can also absorb significant amounts of stormwater. Each linear ft of 12-in GroSoxx (1 square foot) can absorb up to 4 gallons of water. Utilizing 2,000 ft of 12-in GroSoxx, this wall has the potential to absorb up to 8,000 gallons of rainfall per event.[2]

In other applications, replacing a traditional concrete block wall with a permeable GreenLoxx system on a site with a stormwater retention basin or bioretention system, may allow engineering and construction of a smaller stormwater retention basin or bioretention system, and/or increased absorption of area rainfall, and may also contribute to LEED Green Building Credits.

Filtrexx Environmental Sustainability Benefits

Filtrexx GroSoxx® uses **locally recycled organic materials** inside of photodegradable or biodegradable mesh. Diverting these organic materials from landfills and applying them to the soil means a reduction in greenhouse gas emissions. **For every 1,000' of 12" GroSoxx used, 160,000 lbs of organic materials are diverted and your carbon footprint is reduced by 307,000 lbs CO_2e.** This is the equivalent of offsetting the greenhouse gas emissions of **29 passenger vehicles** driven for one year. In addition, the potential water absorption equals up to **4,000 gallons, per rainfall event**.[2]

PROJECT PROFILE: STREAMBANK RESTORATION

Columbia, SC

A Richland County stream had heavily eroded banks, and residents had begun voicing concerns to the County about the loss of land. Richland County took on the project in order to restore the lost real estate. The engineer originally proposed using turf reinforcement mats, but that would have meant taking away even more land to create the necessary slope angle. "The County was looking for a design that would allow for the streambanks to be built back up quickly, almost vertically in some locations, and a design that would also look very natural," said Allison Steele, Stormwater Engineer for Richland County. "The whole point of the project was to give them their yards back." Engineering firm CDM Smith decided to use the GreenLoxx system, not only for its verticality, but also for its ease of installation in a forested environment. The GroSoxx used in the GreenLoxx system mold to fit around trees, eliminating the need to clear cut. Filtrexx® Certified℠ Installers Eco-FX, Inc. (Charlotte, NC) and Coogler Construction, Inc. (Ballentine, SC) teamed up for the custom installation. Together they installed approximately 600 feet of streambank, and the work was completed in about two weeks. GreenLoxx can be installed with or without mechanical reinforcement—this project used both. The GroSoxx were pre-seeded with an annual cover crop. The team returned in spring to plant several hundred native plants for permanent stabilization.

DESIGN SPECIFICATION

5.2 GrowingMedia™

filtrexx® SUSTAINABLE TECHNOLOGIES

PURPOSE & DESCRIPTION

Composted products used for Filtrexx **GrowingMedia™** shall be weed free and derived from a well-decomposed source of organic matter. The composted products shall be produced using an aerobic composting process meeting USEPA CFR 503 regulations (In Canada: M.O.E. 101, C.C.M.E. Type "A" and Type "AA" regulations), including time and temperature data indicating effective weed seed, pathogen and insect larvae kill. The composted products shall be free of any refuse, contaminants or other materials toxic to plant growth. Non-composted products will not be accepted. Test methods for the items below should follow USCC TMECC guidelines for laboratory procedures:

Section

A. PH – 5.0-8.0 in accordance with TMECC 04.11-A, "Electrometric pH Determinations for Compost"

B. Moisture content of less than 60% in accordance with standardized test methods for moisture determination.

C. GrowingMedia to be used with Filtrexx® Soxx™ where seeding and/or live stakes are specified; on low grade slopes where vegetation establishment is the priority; or where rainwater absorption, water holding capacity, runoff reduction and infiltration are the priority shall meet the following particle size distribution. Examples include Soxx for Runoff Diversion, Channel Protection, Bank Stabilization, Severe Slope Stabilization, Vegetated Retaining Walls, Vegetated Gabion, Filtration System, Compost Vegetated Cover, Compost Erosion Control Blanket™, Compost Storm Water Blanket™, Compost Engineered Soil, Compost Bioretention System, Green Roof GrowingMedia.

Particle Sizes - 100% passing a 2 in (50mm) sieve, 99% passing a 1 in (25mm) sieve, minimum of 60% passing a ½ in (12.5mm) sieve in accordance with TMECC 02.02-B, "Sample Sieving for Aggregate Size Classification".

D. Material shall be relatively free (<1% by dry weight) of inert or foreign man made materials.

E. Material feedstocks shall not contain wood materials that have been treated or painted, contain preservatives or adhesives, or are composed of engineered wood products.

F. A sample shall be submitted to the Engineer for approval prior to being used and must comply with all local, state and federal regulations.

Option A: Erosion Control

For vegetated non Soxx applications where slope grades are greater than 3:1, where sheet runoff rate or velocity may be high, or rainfall rate/intensity may be high.

Substitution for Section C. Particle Size of GrowingMedia shall use the following particle size distribution specification: 99% passing a 1 in (25mm) sieve, maximum of 50% passing a 1/2 in (12.5mm) sieve.

Option B: Non-vegetated Temporary Erosion Control

For non-vegetated non Soxx applications where slope grades are greater than 3:1, where sheet runoff rate or velocity may be high, or rainfall rate/intensity may be high.

Substitution for Section C. Particle Size of GrowingMedia shall use the following particle size distribution specification: 99% passing a 3 in (75mm) sieve and a maximum of 30% passing a 1/2 in (12.5mm) sieve.

Rationale for Options: Research conducted at The University of Georgia and Auburn University (Faucette et al, 2006; Faucette, 2006) to evaluate the performance of particle sizes in compost erosion control blankets found that distributions with predominantly small particles absorbed more rainfall, reduced a greater volume of runoff, increased the delay of runoff commencement, and exhibited greater vegetation growth, relative to compost erosion control blankets with large particle sizes. However, compost erosion control blankets with distributions of predominantly large particles slowed runoff rate and reduced soil loss prior to vegetation establishment over compost erosion control blankets with smaller particles sizes.

1.0 - SUMMARY & PROJECT DESCRIPTION

The project includes the development of a single-family residential house on 70 Pleasant Point Drive. The existing lot is approximately 0.642 acres and currently contains a single-family residence. The site is within the Single Residence B Zone and Flood Plain Overlay District and is adjacent to the Piscataqua River on both the southeast and southwest side.

The project proposes to remove the existing dwelling and replace with a new modern 2-story dwelling. Associated improvements include, but are not limited to access, grading, utilities, stormwater management system, lighting, and landscaping. The project proposes a 2,605 SF building footprint and total of 3,546 SF of impervious area within the property lines and approximately 19,907 SF of disturbance to facilitate the development.

This analysis has been completed to verify the project will not pose adverse stormwater effects on-site and off-site. Compared to the pre-development conditions, the post-development stormwater management system has been designed to reduce peak runoff rates, reduce runoff volume, reduce the risk of erosion and sedimentation, and improve stormwater runoff quality. In addition, Best Management Practices are employed to formulate a plan that assures stormwater quality both during and after construction. The following summarizes the findings from the study.

2.0 - CALCULATION METHODS

The design storms analyzed in this study are the 2-year, 10-year, 25 year, and 50-year 24-hour storm events. The software program, HydroCAD version 10.00[1] was utilized to calculate the peak runoff rates from these storm events. The program estimates the peak rates using the TR-20 method. A Type III storm pattern was used in the model. Rainfall frequencies for the analyzed region were also incorporated into the model. Rainfall frequencies from the higher of the Extreme Precipitation Rates from Cornell University's Northeast Regional Climate Center (see Appendix A, Table 1). Due to the project's location within the Coastal/Great Bay Region community, the design rainfall increases the Cornell rates by 15% to address projected storm surge, sea level rise, and precipitation events per Env-Wq 1503.08(l). Design standards were taken from the New Hampshire Stormwater Manual, December 2008[2].

	24-HOUR RAINFALL RATES	
Storm-Event (year)	Northeast Regional Climate Center Extreme Precipitation (in)	Design Rainfall (in)
2	3.21	3.69
10	4.86	5.59
25	6.17	7.10
50	7.38	8.49

Table 1 – 24-Hour Rainfall Rates

Time of Concentration is the time it takes for water to flow from the hydraulically most remote point in the watershed (with the longest travel time) to the watershed outlet. This time is

determined by calculating the time it takes runoff to travel this route under one of three hydrologic conditions: sheet flow, shallow concentrated flow, or channel flow. Because the Intensity-Duration-Frequency (IDF) curve is steep with short TC's, estimating the actual intensity is subject to error and overestimates actual runoff. Due to this, the TC's are adjusted to a minimum of 6 minutes.

3.0 – EXISTING SITE CONDITIONS

The soils within the proposed area of disturbance are identified per the NRCS Web Soil (see Appendix B for detail and soil locations). The soils are composed of Urban land – canton complex (HSG A). These soils are classified as well-drained.

Three test pits and infiltration tests were conducted. In nearly all test pit locations, loam was discovered. Infiltration tests were determined per Ksat testing using a Compact Constant Head Permeameter (Amoozemeter) per Env-Wq 1504.14(d). The highest Estimated Seasonal High-Water Table (ESWT) observed was at: elevation 10.17' at the location of the proposed bioretention system.

4.0 - PRE-DEVELOPMENT CONDITIONS

The pre-development condition is characterized by four subcatchments composing two watersheds, which flows towards the Piscataqua River. Pre-development subcatchment areas are depicted on the attached plan entitled "Pre-Development Drainage Map," Sheet DRAIN-01 in Appendix H.

Stormwater runoff from the site primarily infiltrates into the well-drained soils on-site. The remaining stormwater runoff discharges primarily towards the Piscataqua River (EPR) while the remaining runoff is directed to the neighboring properties to the north of the site (POI-1).

In the pre-development condition, the total impervious area is 3,642 SF over a total drainage analysis area of 27,965 SF.

5.0 - POST-DEVELOPMENT CONDITIONS

The post-development condition is characterized by two watersheds divided into many subcatchment areas. Post-development subcatchment areas are depicted on the attached plan entitled "Post-Development Drainage Map," sheet DRAIN-02 in Appendix I.

In the post-development condition, the total impervious area is 3,561 SF over a total drainage analysis area of 27,965 SF. The total impervious area decreases from the existing amount. Impervious area from the project consists of a 2,605 SF footprint residential building and associated improvements. One rain garden is proposed to treat and mitigate the stormwater runoff from the impact of the new impervious area from the proposed development.

Table 2 summarizes the pre- and post-development peak runoff rates for the 2-year, 10-year, 25 year, and 50-year 24-hour Type III storm events for all discharge. Table 3 summarizes the pre- and post-development peak runoff volumes for the 2-year 24-hour Type III storm events for all discharge.

Table 3 - Pre- and Post- Development Peak Runoff Volume Comparison

The proposed project reduces peak rates of runoff compared to existing conditions for all storm events, in accordance with AoT regulations and Portsmouth stormwater regulations. Additionally, per NHDES, the 2-year 24-hour storm does not result in an increased peak flow rate and reduces volume within the limits of Env-Wq 1507.05(b)(1) from the pre-development to post-development condition. There will be no adverse effects on the abutting properties from the proposed stormwater management system.

Appendices D and F summarize all 24-hour storm events for pre- and post-development drainage calculations using HydroCAD analysis. Appendices E and G provide a full summary of the 10-year, 24-hour storm for the pre- and post-development drainage calculations using HydroCAD analysis.

There were three warning messages for the 10-year storm event related to the proposed rain garden:

- *[87] Warning: Pond ST Oscillations may require smaller dt or Finer Routing (severity=114)*
- *[87] Warning: Pond ST2 Oscillations may require smaller dt or Finer Routing (severity=88)*
- *[87] Warning: Pond ST3: Oscillations may require smaller dt or Finer Routing (severity=156)*

There was one warning message for the 10-year storm event related to the proposed pervious patio and:

- *[87] Warning: Pond PVP Oscillations may require smaller dt or Finer Routing (severity=282)*

Warning 87 is related to the dt and fine routing were adjusted to minimize the severity of this occurrence. The oscillation occurs as the water drains down to the surface of the subsurface

infiltration basins (See Figure 1). Oscillation warnings less than 100 are considered minor. All oscillation errors occur outside of the peak runoff and therefore are not a significant factor in the calculations.

6.0 – REGULATORY COMPLIANCE

The project meets the stricter of the stormwater standards identified in the New Hampshire Department of Environmental Services (DES) Env-Wq 1500 Alteration of Terrain Regulations and Portsmouth stormwater management regulations.

6.1 – PORTSMOUTH STORMWATER MANAGEMENT STANDARDS

The following regulatory requirements are provided to show project conformance to the applicable criteria of Portsmouth Stormwater Management Performance Standards defined in the Portsmouth Zoning Ordinance Section 10.1018.10. All regulations are met.

All construction activities and uses of buildings, structures, and land within wetlands and wetland buffers shall be carried out so as to minimize the volume and rate of stormwater runoff, the amount of erosion, and the export of sediment from the site. All such activities shall be conducted in accordance with Best Management Practices for stormwater management including but not limited to:

1. New Hampshire Stormwater Manual, NHDES, current version.
2. Best Management Practices to Control Non-point Source Pollution: A Guide for Citizens and City Officials, NHDES, January 2004.

7.0 – BEST MANAGEMENT PRACTICES

Best Management Practices will be developed in accordance with the New Hampshire Stormwater Manual, Volumes Two and Three, December 2008[3] to formulate a plan that assures stormwater quality both during and after construction. The intent of the outlined measures is to minimize erosion and sedimentation during construction, stabilize and protect the site from erosion after construction is complete and mitigate any adverse impacts to stormwater quality resulting from development. Best Management Practices for this project include:

- Temporary practices to be implemented during construction.

- Permanent practices to be implemented after construction.

7.1 – TEMPORARY PRACTICES

1. Erosion, sediment, and stormwater detention measures must be installed as directed by the engineer.
2. All disturbed areas, as well as loam stockpiles, shall be seeded and contained by a silt barrier.
3. Silt barriers must be installed prior to any construction commencing. All erosion control devices including silt barriers and storm drain inlet filters shall be inspected at least once per week and following any rainfall. All necessary maintenance shall be completed within twenty-four (24) hours.
4. Any silt barriers found to be failing must be replaced immediately. Sediment is to be removed from behind the silt barrier if found to be one-third the height of the silt barrier or greater.
5. Any area of the site, which has been disturbed and where construction activity will not occur for more than twenty-one (21) days, shall be temporarily stabilized by mulching and seeding.
6. No construction materials shall be buried on-site.
7. After all areas have been stabilized, temporary practices are to be removed, and the area they are removed from must be smoothed and revegetated.
8. Areas must be temporarily stabilized within 14 days of disturbance or seeded and mulched within 3 days of final stabilization.
9. After November 15th, incomplete driveways or parking areas must be protected with a minimum of 3” of crushed gravel, meeting the standards of NHDOT item 304.3.
10. An area shall be considered stable if one of the following has occurred:
    a) Base course gravels are installed in areas to be paved.
    b) A minimum of 85% vegetated growth has been established.
    c) A minimum of 3" of non-erosive material such as stone or rip rap has been installed.
    d) Erosion control blankets have been properly installed.

[3] New Hampshire Stormwater Manual: Volume One - Stormwater and Antidegradation, December 2008; Volume Two - Post-Construction Best Management Practices Selection and Design, December 2008; Volume Three - Erosion and Sediment Controls During Construction, December 2008.

7.2 – PERMANENT PRACTICES

The objectives for developing permanent Best Management Practices for this site include the following:

1. Maintain existing runoff flow characteristics.
    a) Drainage is structured to minimize any offsite increase in runoff

2. Treatment BMP's are established to ensure the water quality.

3. Maintenance schedules are set to safeguard the long-term working of the stormwater BMP's.

7.3 – BEST MANAGEMENT PRACTICE EFFICIENCIES

Appendix E of Volume 2 of the New Hampshire Stormwater [4] lists the pollutant removal efficiencies of various BMP's. All proposed BMP's meet all state and Portsmouth requirements for total suspended solids (TSS) and pollutant removal, Total Nitrogen (TN), and Total Phosphorous (TP).

Bioretention Systems have a 90% TSS removal efficiency, 65% TN removal efficiency, and 65% TP efficiency.

8.0 – GENERAL CONSTRUCTION SEQUENCING

To minimize erosion and sedimentation due to construction, construction shall follow this general construction sequence.

Modifications to the sequence necessary due to the contractor's schedule shall include appropriate temporary and permanent erosion and sedimentation control measures.

The contractor shall schedule work such that any construction area is stabilized within 45 days of initial disturbance except as noted below. No more than 5 acres of disturbed land shall be unstabilized at any one time.

The project shall be managed so that it meets the requirements and intent of RSA 430:53 and chapter ARG 3800 relative to invasive species.

Do not traffic exposed soil surface of infiltration systems with construction equipment. If feasible, perform excavations with equipment positioned outside the limits of the infiltration components of the system.

Do not discharge sediment-laden waters from construction activities (runoff, water from excavations) to stormwater bmp's. Stormwater runoff must be directed to temporary practices until stormwater bmp's are stabilized.

Do not place stormwater bmp's into service until the contributing areas have been fully stabilized.

[4] New Hampshire Stormwater Manual: Volume One - Stormwater and Antidegradation, December 2008; Volume Two - Post-Construction Best Management Practices Selection and Design, December 2008; Volume Three - Erosion and Sediment Controls During Construction, December 2008.

After the infiltration system is excavated to the final design elevation, the floor should be deeply tilled with a rotary tiller or disc harrow to restore the infiltration rates, followed by a pass with a leveling drag.

1. Notify easement owners prior to commencement of work.
2. Install all perimeter erosion protection measures as indicated on the plans prior to the commencement of construction.
3. Stormwater treatment ponds and swales shall be installed before rough grading the site.
4. During construction every effort shall be made to manage surface runoff quality.
5. Daily, or as required, construct temporary berms, drains, ditches, silt barriers, sediment traps, etc. Mulch and seed as required. (temporary seed mixture of winter rye applied at a rate of 2.5 lbs/1000 sf shall be used).
6. Conduct major earthwork, including clearing and grubbing, within the limits of work. All cut and fill slopes shall be seeded within 72 hours after grading.
7. All stripped topsoil and other earth materials shall be stockpiled outside the immediate work and 100' buffer. A silt barrier shall be constructed around these piles in a manner to provide access and avoid sediment outside of the work area.
8. Construct building pad and commence new building construction.
9. Construct temporary diversions as required.
10. Begin permanent and temporary installation of seed and mulch.
11. Perform earthwork necessary to establish rough grading around driveway. Manage exposed soil surfaces to avoid transporting sediments into wetlands.
12. Install subsurface utilities (water, sewer, gas, electric, communications, drainage, drainage facilities, etc.).
13. Construct proposed driveway, rain gardens, gravel wetlands and drainage swales. All ditches, swales, and gravel wetlands shall be fully stabilized prior to directing flow to them.
14. Complete building and all off-site improvements.
15. Complete seeding and mulching. Seed to be applied with broadcast spreader or by hydro-seeding, then rolled, raked, or dragged to assure seed/soil contact.
16. Remove temporary erosion control measures after seeded areas have become firmly established and site improvements are complete.
17. During the course of the work and upon completion, the contractor shall remove all sediment deposits, either on or off site, including catch basins, and sumps, drain pipes and ditches, curb lines, along silt barriers, etc. Resulting from soil and/or construction operations.
18. See winter construction sequence for work conducted after October 15th.

9.0 – CONCLUSION

The proposed stormwater management system will treat, infiltrate, and mitigate the runoff generated from the proposed development and provide protection of groundwater and surface waters as required through the Alteration of Terrain Bureau and Portsmouth stormwater management regulations. Further, the surface water peak runoff rate is reduced in the 2-year, 10-year, 25-year, and 50-year storm. The project has been designed in accordance with NHDES and Portsmouth regulations. There is little change in the flow characteristics of the site. The proposed project has been designed to pose no adverse effects on surrounding properties.

APPENDIX B – SITE-SPECIFIC SOIL SURVEY & NRCS WEB SOIL REPORT

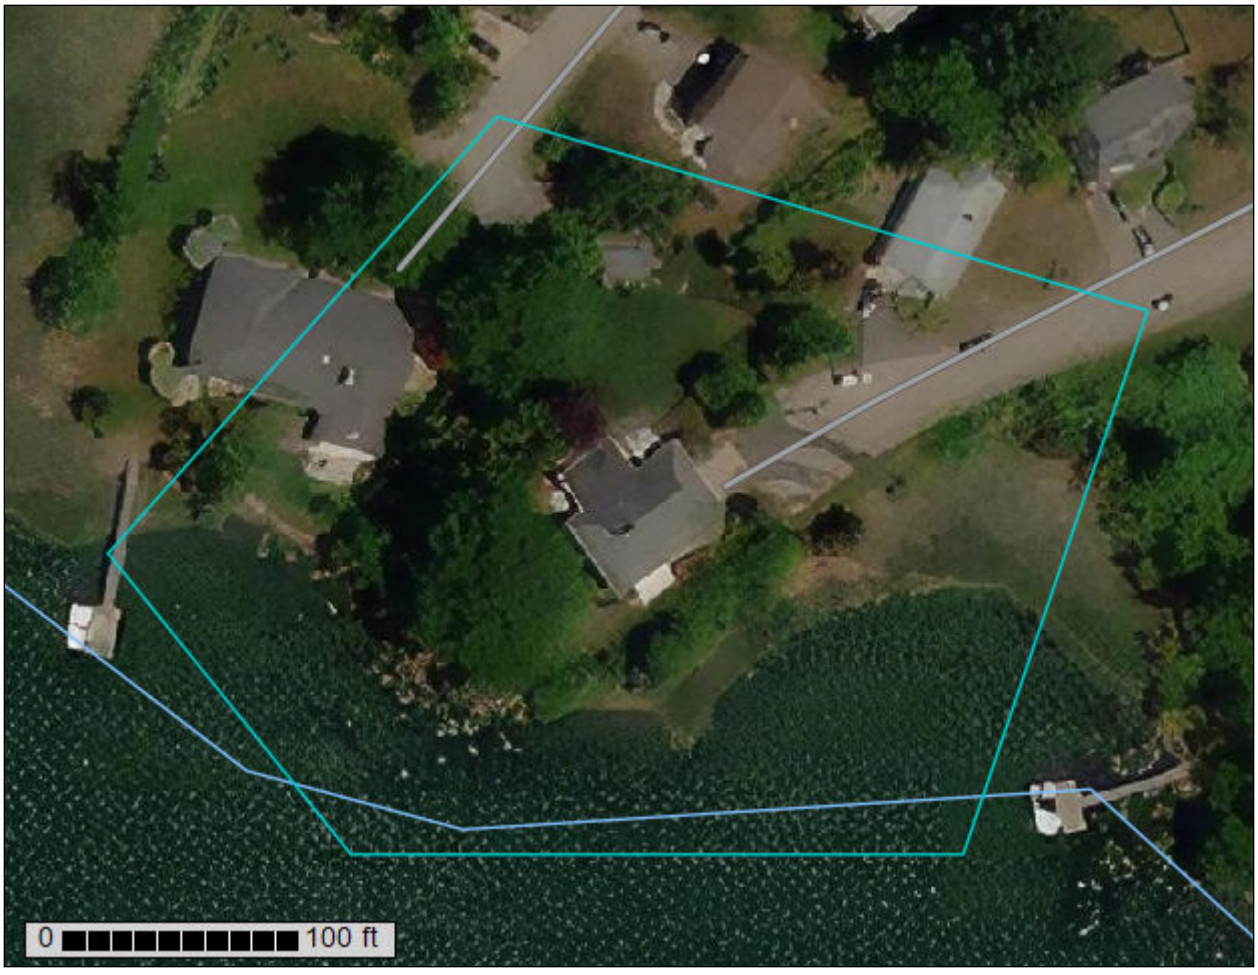
Custom Soil Resource Report for Rockingham County, New Hampshire



Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (https://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil

scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and

identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however,

onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

ROCK BLASTING AND WATER QUALITY NOTES

1. IDENTIFY DRINKING WATER WELLS LOCATED WITHIN 2000 FEET OF THE PROPOSED BLASTING ACTIVITIES. DEVELOP A GROUNDWATER QUALITY SAMPLING PROGRAM TO MONITOR FOR NITRATE AND NITRITE EITHER IN THE DRINKING WATER SUPPLY WELLS OR IN OTHER WELLS THAT ARE REPRESENTATIVE OF THE DRINKING WATER SUPPLY WELLS IN THE AREA. THE PLAN MUST INCLUDE PRE AND POST BLAST WATER QUALITY MONITORING AND BE APPROVED BY NHDES PRIOR TO INITIATING BLASTING. THE GROUNDWATER SAMPLING PROGRAM MUST BE IMPLEMENTED ONCE APPROVED BY NHDES.

2. ALL ACTIVITIES RELATED TO BLASTING SHALL FOLLOW BEST MANAGEMENT PRACTICES (BMPS) TO PREVENT CONTAMINATION OF GROUNDWATER INCLUDING PREPARING, REVIEWING, AND FOLLOWING AN APPROVED BLASTING PLAN; PROPER DRILLING, EXPLOSIVE HANDING AND LOADING PROCEDURES; OBSERVING THE ENTIRE BLASTING PROCEDURES; EVALUATING BLASTING PERFORMANCE; AND HANDLING AND STORAGE OF BLASTED ROCK.
   A. LOADING PRACTICES. THE FOLLOWING BLASTHOLE LOADING PRACTICES TO MINIMIZE ENVIRONMENTAL EFFECTS SHALL BE FOLLOWED:
      (1) DRILLING LOGS SHALL BE MAINTAINED BY THE DRILLER AND COMMUNICATED DIRECTLY TO THE BLASTER. THE LOGS SHALL INDICATE DEPTHS AND LENGTHS OF VOIDS, CAVITIES, AND FAULT ZONES OR OTHER WEAK ZONES ENCOUNTERED AS WELL AS GROUNDWATER CONDITIONS.
      (2) EXPLOSIVE PRODUCTS SHALL BE MANAGED ON SITE SO THAT THEY ARE EITHER USED IN THE BOREHOLE, RETURNED TO THE DELIVERY VEHICLE, OR PLACED IN SECURE CONTAINERS FOR OFF–SITE DISPOSAL.
      (3) SPILLAGE AROUND THE BOREHOLE SHALL EITHER BE PLACED IN THE BOREHOLE OR CLEANED UP AND RETURNED TO AN APPROPRIATE VEHICLE FOR HANDLING OR PLACEMENT IN SECURED CONTAINERS FOR OFF SITE DISPOSAL.
      (4) LOADED EXPLOSIVES SHALL BE DETONATED AS SOON AS POSSIBLE AND SHALL NOT BE LEFT IN THE BLASTHOLES OVERNIGHT, UNLESS WEATHER OR OTHER SAFETY CONCERNS REASONABLY DICTATE THAT DETONATION SHOULD BE POSTPONED.
      (5) LOADING EQUIPMENT SHALL BE CLEANED IN AN AREA WHERE WASTEWATER CAN BE PROPERLY CONTAINED AND HANDLED IN A MANNER THAT PREVENTS RELEASE OF CONTAMINANTS TO THE ENVIRONMENT.
      (6) EXPLOSIVES SHALL BE LOADED TO MAINTAIN GOOD CONTINUITY IN THE COLUMN LOAD TO PROMOTE COMPLETE DETONATION. INDUSTRY ACCEPTED LOADING PRACTICES FOR PRIMING, STEMMING, DECKING, AND COLUMN RISE NEED TO BE ATTENDED TO.
   B. EXPLOSIVE SELECTION. THE FOLLOWING BMPS SHALL BE FOLLOWED TO REDUCE THE POTENTIAL FOR GROUNDWATER CONTAMINATION WHEN EXPLOSIVES ARE USED:
      (1) EXPLOSIVE PRODUCTS SHALL BE SELECTED THAT ARE APPROPRIATE FOR SITE CONDITIONS AND SAFE BLAST EXECUTION.
      (2) EXPLOSIVE PRODUCTS SHALL BE SELECTED THAT HAVE THE APPROPRIATE WATER RESISTANCE FOR THE SITE CONDITIONS PRESENT TO MINIMIZE THE POTENTIAL FOR HAZARDOUS EFFECT OF THE PRODUCT UPON GROUNDWATER.
   C. PREVENTION OF MISFIRES. APPROPRIATE PRACTICES SHALL BE DEVELOPED AND IMPLEMENTED TO PREVENT MISFIRES.
   D. MUCK PILE MANAGEMENT. MUCK PILES (THE BLASTED PIECES OF ROCK) AND ROCK PILES SHALL BE MANAGED IN A MANNER TO REDUCE THE POTENTIAL FOR CONTAMINATION BY IMPLEMENTING THE FOLLOWING MEASURES:
      (1) REMOVE THE MUCK PILE FROM THE BLAST AREA AS SOON AS REASONABLY POSSIBLE.
      (2) MANAGE THE INTERACTION OF BLASTED ROCK PILES AND STORMWATER TO PREVENT CONTAMINATION OF WATER SUPPLY WELLS OR SURFACE WATER.
   E. SPILL PREVENTION MEASURES AND SPILL MITIGATION. SPILL PREVENTION AND SPILL MITIGATION MEASURES SHALL BE IMPLEMENTED TO PREVENT THE RELEASE OF FUEL AND OTHER RELATED SUBSTANCES TO THE ENVIRONMENT. THE MEASURES SHALL INCLUDE AT A MINIMUM:
      (1) THE FUEL STORAGE REQUIREMENTS SHALL INCLUDE:
         - STORAGE OF REGULATED SUBSTANCES ON AN IMPERVIOUS SURFACE.
         - SECURE STORAGE AREAS AGAINST UNAUTHORIZED ENTRY.
         - LABEL REGULATED CONTAINERS CLEARLY AND VISIBLY.
         - INSPECT STORAGE AREAS WEEKLY.
         - COVER REGULATED CONTAINERS IN OUTSIDE STORAGE AREAS.
         - WHEREVER POSSIBLE, KEEP REGULATED CONTAINERS THAT ARE STORED OUTSIDE MORE THAN 50 FEET FROM SURFACE WATER AND STORM DRAINS, 75 FEET FROM PRIVATE WELLS, AND 400 FEET FROM PUBLIC WELLS.
         - SECONDARY CONTAINMENT IS REQUIRED FOR CONTAINERS CONTAINING REGULATED SUBSTANCES STORED OUTSIDE, EXCEPT FOR ON PREMISE USE HEATING FUEL TANKS, OR ABOVEGROUND OR UNDERGROUND STORAGE TANKS OTHERWISE REGULATED.
      (2) THE FUEL HANDLING REQUIREMENTS SHALL INCLUDE:
         - EXCEPT WHEN IN USE, KEEP CONTAINERS CONTAINING REGULATED SUBSTANCES CLOSED AND SEALED.
         - PLACE DRIP PANS UNDER SPIGOTS, VALVES, AND PUMPS.
         - HAVE SPILL CONTROL AND CONTAINMENT EQUIPMENT READILY AVAILABLE IN ALL WORK AREAS.
         - USE FUNNELS AND DRIP PANS WHEN TRANSFERRING REGULATED SUBSTANCES.
         - PERFORM TRANSFERS OF REGULATED SUBSTANCES OVER AN IMPERVIOUS SURFACE.
      (3) THE TRAINING OF ONSITE EMPLOYEES AND THE ON SITE POSTING OF RELEASE RESPONSE INFORMATION DESCRIBING WHAT TO DO IN THE EVENT OF A SPILL OF REGULATED SUBSTANCES.
      (4) FUELING AND MAINTENANCE OF EXCAVATION, EARTHMOVING, AND OTHER CONSTRUCTION RELATED EQUIPMENT WILL COMPLY WITH THE REGULATIONS OF NHDES (NOTE THESE REQUIREMENTS ARE SUMMARIZED IN WD DWGB 22 6: "BEST MANAGEMENT PRACTICES FOR FUELING AND MAINTENANCE OF EXCAVATION AND EARTHMOVING EQUIPMENT"OR ITS SUCCESSOR DOCUMENT).

1. SEE NOTES ON SHEET C–01.
2. THE CONTRACTOR SHALL BE RESPONSIBLE FOR VERIFYING AND DETERMINING THE LOCATIONS, SIZE, AND ELEVATIONS OF ALL EXISTING UTILITIES, SHOWN OR NOT SHOWN ON THESE PLANS PRIOR TO THE START OF ANY DEMOLITION. THE LOCATIONS SHOWN ON THESE PLANS ARE NOT GUARANTEED BY THE OWNER OR THE ENGINEER. THE ENGINEER SHALL BE NOTIFIED IN WRITING OF ANY UTILITIES INTERFERING WITH THE PROPOSED DEMOLITION TO DETERMINE APPROPRIATE ACTION TO BE TAKEN BEFORE PROCEEDING WITH THE WORK. IT IS ALSO THE CONTRACTOR'S RESPONSIBILITY TO ANTICIPATE CONFLICTS AND REPAIR EXISTING UTILITIES AS NECESSARY TO COMPLETE THE WORK AT NO ADDITIONAL COST TO THE OWNER.
3. THE CONTRACTOR SHALL MAINTAIN EMERGENCY ACCESS TO ALL AREAS AFFECTED BY WORK AT ALL TIMES.
4. THE CONTRACTOR SHALL VERIFY ALL SURVEY INFORMATION IN THE FIELD AND REPORT ANY DISCREPANCIES TO THE ENGINEER PRIOR TO THE START OF CONSTRUCTION.
5. EXISTING UTILITY SERVICES TO BE DISCONTINUED ARE TO BE CAPPED AS REQUIRED BY THE RESPECTIVE UTILITY COMPANIES.
6. CONSTRUCTION DEBRIS AND INVASIVE SPECIES SHALL BE REMOVED FROM SITE AND DISPOSED OF IN A LEGAL MANNER.
7. PRIOR TO THE START OF WORK, THE CONTRACTOR SHALL PLACE ORANGE CONSTRUCTION FENCING AROUND EACH TREE TO BE RETAINED THROUGHOUT CONSTRUCTION. NO STOCKPILES OF MATERIAL ARE PERMITTED WITHIN THE DRIP LINE OF THE TREES TO BE SAVED.
8. CONTACT THE LANDSCAPE ARCHITECT IMMEDIATELY IF ANY TREES ARE DAMAGED DURING CONSTRUCTION.

CONSTRUCTION SEQUENCE NOTES

TO MINIMIZE EROSION AND SEDIMENTATION DUE TO CONSTRUCTION, CONSTRUCTION SHALL FOLLOW THIS GENERAL CONSTRUCTION SEQUENCE.

MODIFICATIONS TO THE SEQUENCE NECESSARY DUE TO THE CONTRACTOR'S SCHEDULE SHALL INCLUDE APPROPRIATE TEMPORARY AND PERMANENT EROSION AND SEDIMENTATION CONTROL MEASURES.

THE CONTRACTOR SHALL SCHEDULE WORK SUCH THAT ANY CONSTRUCTION AREA IS STABILIZED WITHIN 45 DAYS OF INITIAL DISTURBANCE EXCEPT AS NOTED BELOW. NO MORE THAN 5 ACRES OF DISTURBED LAND SHALL BE UNSTABILIZED AT ANY ONE TIME.

THE PROJECT SHALL BE MANAGED SO THAT IT MEETS THE REQUIREMENTS AND INTENT OF RSA 430:53 AND CHAPTER ARG 3800 RELATIVE TO INVASIVE SPECIES.

DO NOT TRAFFIC EXPOSED SOIL SURFACE OF INFILTRATION SYSTEMS WITH CONSTRUCTION EQUIPMENT. IF FEASIBLE, PERFORM EXCAVATIONS WITH EQUIPMENT POSITIONED OUTSIDE THE LIMITS OF THE INFILTRATION COMPONENTS OF THE SYSTEM.

DO NOT DISCHARGE SEDIMENT–LADEN WATERS FROM CONSTRUCTION ACTIVITIES (RUNOFF, WATER FROM EXCAVATIONS) TO STORMWATER BMP'S. STORMWATER RUNOFF MUST BE DIRECTED TO TEMPORARY PRACTICES UNTIL STORMWATER BMP'S ARE STABILIZED.

DO NOT PLACE STORMWATER BMP'S INTO SERVICE UNTIL THE CONTRIBUTING AREAS HAVE BEEN FULLY STABILIZED.

AFTER THE INFILTRATION SYSTEM IS EXCAVATED TO THE FINAL DESIGN ELEVATION, THE FLOOR SHOULD BE DEEPLY TILLED WITH A ROTARY TILLER OR DISC HARROW TO RESTORE THE INFILTRATION RATES, FOLLOWED BY A PASS WITH A LEVELING DRAG.

1. NOTIFY EASEMENT OWNERS PRIOR TO COMMENCEMENT OF WORK.
2. INSTALL ALL PERIMETER EROSION PROTECTION MEASURES AS INDICATED ON THE PLANS PRIOR TO THE COMMENCEMENT OF CONSTRUCTION.
3. STORMWATER TREATMENT PONDS AND SWALES SHALL BE INSTALLED BEFORE ROUGH GRADING THE SITE.
4. DURING CONSTRUCTION EVERY EFFORT SHALL BE MADE TO MANAGE SURFACE RUNOFF QUALITY.
5. DAILY, OR AS REQUIRED, CONSTRUCT TEMPORARY BERMS, DRAINS, DITCHES, SILT BARRIERS, SEDIMENT TRAPS, ETC. MULCH AND SEED AS REQUIRED. (TEMPORARY SEED MIXTURE OF WINTER RYE APPLIED AT A RATE OF 2.5 LBS/1000 SF SHALL BE USED).
6. CONDUCT MAJOR EARTHWORK, INCLUDING CLEARING AND GRUBBING, WITHIN THE LIMITS OF WORK. ALL CUT AND FILL SLOPES SHALL BE SEEDED WITHIN 72 HOURS AFTER GRADING.
7. ALL STRIPPED TOPSOIL AND OTHER EARTH MATERIALS SHALL BE STOCKPILED OUTSIDE THE IMMEDIATE WORK AND 100' BUFFER. A SILT BARRIER SHALL BE CONSTRUCTED AROUND THESE PILES IN A MANNER TO PROVIDE ACCESS AND AVOID SEDIMENT OUTSIDE OF THE WORK AREA.
8. CONSTRUCT BUILDING PAD AND COMMENCE NEW BUILDING CONSTRUCTION.
9. CONSTRUCT TEMPORARY DIVERSIONS AS REQUIRED.
10. BEGIN PERMANENT AND TEMPORARY INSTALLATION OF SEED AND MULCH.
11. PERFORM EARTHWORK NECESSARY TO ESTABLISH ROUGH GRADING AROUND DRIVEWAY. MANAGE EXPOSED SOIL SURFACES TO AVOID TRANSPORTING SEDIMENTS INTO WETLANDS.
12. INSTALL SUBSURFACE UTILITIES (WATER, SEWER, GAS, ELECTRIC, COMMUNICATIONS, DRAINAGE, DRAINAGE FACILITIES, ETC.).
13. CONSTRUCT PROPOSED DRIVEWAY, RAIN GARDENS, GRAVEL WETLANDS AND DRAINAGE SWALES. ALL DITCHES, SWALES, AND GRAVEL WETLANDS SHALL BE FULLY STABILIZED PRIOR TO DIRECTING FLOW TO THEM.
14. COMPLETE BUILDING AND ALL OFF–SITE IMPROVEMENTS.
15. COMPLETE SEEDING AND MULCHING. SEED TO BE APPLIED WITH BROADCAST SPREADER OR BY HYDRO–SEEDING, THEN ROLLED, RAKED, OR DRAGGED TO ASSURE SEED/SOIL CONTACT.
16. REMOVE TEMPORARY EROSION CONTROL MEASURES AFTER SEEDED AREAS HAVE BECOME FIRMLY ESTABLISHED AND SITE IMPROVEMENTS ARE COMPLETE.
17. DURING THE COURSE OF THE WORK AND UPON COMPLETION, THE CONTRACTOR SHALL REMOVE ALL SEDIMENT DEPOSITS, EITHER ON OR OFF SITE, INCLUDING CATCH BASINS, AND SUMPS, DRAIN PIPES AND DITCHES, CURB LINES, ALONG SILT BARRIERS, ETC. RESULTING FROM SOIL AND/OR CONSTRUCTION OPERATIONS.
18. SEE WINTER CONSTRUCTION SEQUENCE FOR WORK CONDUCTED AFTER OCTOBER 15TH.

EROSION CONTROL NOTES

1. EXPOSED EARTHWORK SHALL BE CONFINED TO AS LIMITED AN AREA AS IS PRACTICAL AT ANY GIVEN TIME THROUGHOUT THE CONSTRUCTION SEQUENCE. LIMIT OF WORK IS NOTED ON THIS SHEET. CONTRACTOR TO WORK WITHIN THESE LIMITS AS SHOWN. NO AREA OF THE SITE SHALL BE LEFT IN AN UNSTABILIZED CONDITION FOR A PERIOD OF TIME EXCEEDING FIVE CALENDAR DAYS.

2. TEMPORARY EROSION CONTROL MEASURES SHALL BE INSTALLED IN STRICT ACCORDANCE WITH PROJECT PANS. IN ADDITION SIMILAR MEASURES SHALL BE INSTALLED WHERE AND WHEN THE FIELD CONDITION, OR FIELD OPERATION OF THE INDIVIDUAL SITE CONTRACTOR MAY WARRANT. ALL TEMPORARY EROSION CONTROL MEASURES USED SHALL BE INSPECTED WEEKLY AND WITHIN 24 HOURS AFTER 0.5" OF RAINFALL OR MORE. THEY SHALL BE CLEANED AND MAINTAINED AND OTHERWISE KEPT IN AN EFFECTIVE OPERATING MANNER THROUGHOUT THE CONSTRUCTION PERIOD.

3. ALL DISTURBED AREAS DESIGNATED TO BE TURF SHALL RECEIVE A MINIMUM OF 4" LOAM (COMPACTED THICKNESS), PRIOR TO SEEDING AND MULCHING.

4. ALL SWALES AND DITCH LINES SHALL BE PERIODICALLY CLEANED OF DEPOSITED SEDIMENT SO AS TO MAINTAIN AND EFFECTIVE GRADE AND CROSS SECTION. ALL SWALES AND DITCH LINES SHALL BE FULLY STABILIZED PRIOR TO HAVING STORMWATER DIRECTED TOWARDS THEM.

5. IN THE EVENT THAT, DURING CONSTRUCTION OF ANY PORTION OF THIS PROJECT, A WINTER SHUTDOWN IS NECESSARY, THE CONTRACTOR SHALL STABILIZE ALL INCOMPLETE WORK AND PROVIDE FOR SUITABLE METHODS OF DIVERTING RUNOFF IN ORDER TO ELIMINATE SHEET FLOW ACROSS FROZEN SURFACES.

6. AN AREA SHALL BE CONSIDERED STABILIZE IF ONE OF THE FOLLOWING HAS OCCURRED:
   - A. BASE COURSE OF GRADES ARE INSTALLED IN AREAS TO BE PAVED;
   - B. A MINIMUM OF 85% VEGETATIVE GROWTH HAS BEEN ESTABLISHED;
   - C. A MINIMUM OF 3" OF NON-EROSIVE MATERIALS, SUCH AS STONE OR RIP-RAP HAS BEEN INSTALLED; AND/OR
   - D. EROSION CONTROL BLANKETS HAVE BEEN PROPERLY INSTALLED.

7. DUST SHALL BE CONTROLLED BY THE USE OF WATER AS NECESSARY THROUGHOUT THE CONSTRUCTION PERIOD.

8. IN NO WAY ARE THE TEMPORARY EROSION CONTROL MEASURES INDICATED ON THESE PLANS CONSIDERED ALL INCLUSIVE. THE CONTRACTOR SHALL USE JUDGMENT IN INSTALLING SUPPLEMENTARY EROSION CONTROL MEASURES WHERE AND WHEN SPECIFIC SITE CONDITIONS AND/OR CONSTRUCTION METHODOLOGIES MAY WARRANT.

9. ALL EROSION CONTROL METHODS TO BE INSTALLED AS PER MANUFACTURERS SPECIFICATIONS AS WELL AS INDICATED IN THE NEW HAMPSHIRE STORMWATER MANUAL "EROSION AND SEDIMENT CONTROL DURING CONSTRUCTION."

10. ALL ROADS, PATHS, DRIVEWAYS, PATIOS AND POOL DECKS SHALL BE STABILIZED WITHIN 72 HOURS OF ACHIEVING FINISH GRADE.

11. ALL CUT AND FILL SLOPES SHALL BE STABILIZED WITHIN 48 HOURS OF ACHIEVING FINISH GRADE.

Re: 81 Taft Rd – Variance Application
Dimensional Relief – Single Residence B

Dear Mr. Stith and Zoning Board Members,

Yankee Construction LLC is submitting the following Variance Application requesting dimensional relief as an authorized agent behalf of Tom and Angela Mita (the Owners) of 81 Taft Rd (the Home). The primary area of concern requiring dimensional relief is secondary frontage to the adjacent Elwyn Rd (north side).

The following statement has been prepared in accordance with Portsmouth Zoning Ordinance Section 10.233.20.

10.233.21 – The variance will not be contrary to the public interest
The proposed addition will not be contrary to public interest. The overall addition footprint of 235 sqft is small in size and will be constructed in manner architecturally similar to the Home. The neighborhood is generally comprised of single residential dwellings, many of which have similarly sized additions.

10.233.22 – The spirit of the ordinance will be observed
The existing home currently faces Taft Rd and the northern side yard of the property well exceeds the standard 10 ft setback for Single Residence B (SRB) homes. Due to the existing Home being a corner lot, there is secondary frontage to Elwyn Rd. The proposed addition will be approximately 20 ft from Elwyn Rd at its nearest point. Further, an existing privacy stockade fence that is approximately 10 ft from Elwyn Rd at it's nearest point will be reconfigured creating more visual space between Elwyn Rd and the Home.

10.233.23 – Substantial justice will be done

The proposed addition does not infringe upon any neighboring properties or homeowners. The proposed addition does not negatively affect the general public. There would be no foreseeable gain to the general public by denying this variance and alteration to the plan would result unnecessary costs to the Owners.

10.233.24 – The values of the surrounding properties will not be diminished

The proposed addition will be constructed in an aesthetically pleasing manner that would not dimmish the values of neighboring properties. The addition would be expected to add value to the Home thereby having a positive influence on the surrounding properties.

10.233.25 – Literal enforcement of the provisions of the Ordinance would result in an unnecessary hardship

The proposed addition will be utilized as a master bedroom and has been situated on the property to offer both aesthetic value and function as to how it is tied into the existing structure. Altering he location of the addition would require it to be larger in size or impact more of the existing home. Both instances would result in unnecessary costs to the homeowner while offering no benefit in either aesthetic of function.

Key project notes:

- There is currently 1,936 sqft of wetland buffer extending across the northeast corner of the lot. The proposed addition will disturb 17 sqft (0.88%) of the wetland buffer on the lot. A Wetland Conditional Use Permit application has been submitted in parallel.
- Lot and Impervious Surface Data
    - Lot size: 8,765 sqft (2021 professional survey)
    - Existing home size: 1,560 sqft
    - Proposed addition footprint: 235 sqft
    - Driveway coverage: 404 sqft
    - Other impervious coverage: 204 sqft (small concrete patio)
    - Lot topography is generally flat or mildly sloped (3 – 15% slopes)
    - Primary ground cover is lawn, vegetated, landscape beds
    - Area soils are well drained, generally gravelly fine sandy loam over loamy sand (source USDA / NRCS Soil Survey)

CONDITIONAL USE PERMIT

RE: Lancen & Sophie LaChance
11 Fletcher St
Portsmouth, NH 03801
Tax Map 233, Lot 76-1

This project involves construction of a house on an existing vacant lot. The house, attached garage, porch, and deck will all be outside the 100' wetland buffer. A conditional use permit is required because the proposed stormwater drain outlet will be in the wetland buffer. The department of public works recommends that the drain outlet be located in the lower lot corner as shown. The drain outlet will provide a direct route to the wetland area and avoid a flowpath towards Lot 73 which is in a low-lying area.

Proposed site improvements include:

1. Pervious paver driveway to collect runoff from the driveway and the northern garage roof.

2. Infiltration trenches along the perimeter of the building collecting runoff from the roofs.

3. A stone area beneath the deck to collect runoff from the roofs, as well as stormwater from the pervious pavers and infiltration trenches. Water is stored in this area, before being slowly released to the outlet protection in the southwest through a 4" pipe. Wetland buffer plantings will be installed surrounding the outlet.

4. Sewer and water trenches are proposed to connect to existing lines on Sims Ave.

A drainage study has been prepared and after the improvements are installed the stormwater runoff rate will be lower than currently exists.

Sincerely,

Alex Ross, PE, LLS

INSPECTION AND MAINTENANCE OF FACILITIES AND PROPERTY

A. MAINTENANCE OF COMMON FACILITIES OR PROPERTY

1. FUTURE OWNERS OR ASSIGNS ARE RESPONSIBLE FOR MAINTENANCE OF ALL STORMWATER INFRASTRUCTURE ASSOCIATED WITH THE FACILITY AND THE PROPERTY. THIS INCLUDES THE ROOF DRAINAGE SYSTEM, STONE INFILTRATION BEDS, GRAVEL AREAS, AND THE PERVIOUS PAVEMENT.

B. GENERAL INSPECTION AND MAINTENANCE REQUIREMENTS

1. PERMANENT STORMWATER AND SEDIMENT AND EROSION CONTROL FACILITIES TO BE MAINTAINED ON THE SITE INCLUDE BUT ARE NOT LIMITED TO THE FOLLOWING:

a. ROOF DRAINAGE SYSTEM
b. CRUSHED STONE INFILTRATION BEDS
c. DRAIN LINES
d. PERVIOUS PAVEMENT

2. MAINTENANCE OF PERMANENT MEASURES SHALL FOLLOW THE FOLLOWING SCHEDULE:

a. DRIVEWAY, PARKING LOT INSPECTION AT THE END OF EVERY WINTER, PRIOR TO THE START OF THE SPRING RAIN SEASON. SAND/DEBRIS THAT HAS COLLECTED OFF THE DRIVEWAY AND PARKING LOT SHOULD BE REMOVED OFF-SITE AND DISPOSED OF PROPERLY.

b. ANNUAL INSPECTION OF THE SITE FOR EROSION, DESTABILIZATION, SETTLING, AND SLOUGHING. ANY NEEDED REPAIRS ARE TO BE CONDUCTED IMMEDIATELY.

c. ANNUAL INSPECTION OF SITE'S VEGETATION AND LANDSCAPING. ANY AREAS THAT ARE BARE SHALL BE RESEEDED AND MULCHED WITH HAY OR, IF THE CASE IS EXTREME, LOAMED AND SEEDED OR SODDED TO ENSURE ADEQUATE VEGETATIVE COVER. LANDSCAPE SPECIMENS SHALL BE REPLACED IN-KIND, IF THEY ARE FOUND TO BE DEAD OR DYING.

d. THE FOLLOWING RECOMMENDATIONS WILL HELP ASSURE THAT THE ROOF DRAINAGE SYSTEM IS MAINTAINED TO PRESERVE ITS EFFECTIVENESS:

i. INITIALLY, PRIOR TO A CERTIFICATE OF OCCUPANCY FOR THE RESIDENTIAL UNITS, IT SHOULD BE TESTED BY INSERTING A GARDEN HOSE INTO THE INLET AND ALLOWING THE WATER TO RUN AT FULL STRENGTH FOR A MINIMUM OF ONE HOUR. THE WATER SHOULD STAY UNDERGROUND WITHIN THE GRAVEL. IF WATER COMES OUT OF THE OVERFLOW, THE SYSTEM SHOULD BE FURTHER INSPECTED AND POSSIBLY REPLACED. THIS PROCEDURE SHOULD BE PERFORMED EVERY YEAR DURING THE ANNUAL INSPECTION.

ii. IN THE SPRING AND FALL, VISUALLY INSPECT THE AREA AROUND THE SYSTEM AND REPAIR ANY EROSION. USE SMALL STONES TO STABILIZE EROSION ALONG DRAINAGE PATHS. RE-MULCH ANY VOID AREAS BY HAND AS NEEDED. ALSO, INSPECT THE ROOF COLLECTION AND PIPING AND CLEAN AND REPAIR AS NECESSARY.

iii. DO NOT PLANT DEEP ROOTED TREES AND SHRUBS WITHIN 5' OF THE SYSTEM.

iv. KEEP HEAVY VEHICLES FROM DRIVING OR PARKING OVER THE SYSTEM.

e. THE FOLLOWING REQUIREMENTS WILL HELP ASSURE THAT THE PERVIOUS PAVEMENT SYSTEM IS MAINTAINED TO PRESERVE ITS EFFECTIVENESS:

i. INSPECTION OF SITE SHALL OCCUR MONTHLY FOR THE FIRST FEW MONTHS AFTER CONSTRUCTION. THEN INSPECTIONS CAN OCCUR ON AN ANNUAL BASIS, PREFERABLY AFTER RAIN EVENTS WHEN CLOGGING CAN OCCUR AND BE OBVIOUS. PERMEABLE PAVEMENT REQUIRES MINIMAL MAINTENANCE; HOWEVER MAINTENANCE IS ABSOLUTELY NECESSARY TO ENSURE A PROPER WORKING SYSTEM.

ii. ASPHALT SEAL COATING IS ABSOLUTELY FORBIDDEN. SURFACE SEAL COATING IS NOT REVERSIBLE.

iii. STREET SWEEPERS WITH VACUUMS, WATER, AND BRUSHES CAN BE USED TO RESTORE PERMEABILITY. FOLLOW SWEEPING WITH HIGH-PRESSURE HOSING OF THE SURFACE PORES. SURFACE SHOULD BE VACUUMED 4 TIMES PER YEAR, AND AT ANY ADDITIONAL TIMES SEDIMENT IS SPILLED, ERODED, OR TRACKED ONTO THE SURFACE.

iv. PLANTED AREAS ADJACENT TO PERVIOUS PAVEMENT SHOULD BE WELL MAINTAINED TO PREVENT SOIL WASHOUT ONTO THE PAVEMENT. IF ANY BARE SPOTS OR ERODED AREAS ARE OBSERVED WITHIN THE PLANTED AREAS, THEY SHOULD BE REPLANTED AND/OR STABILIZED AT ONCE.

v. IMMEDIATELY CLEAN ANY SOIL DEPOSITED ON PAVEMENT. SUPERFICIAL DIRT DOES NOT NECESSARILY CLOG THE VOIDS. HOWEVER, DIRT THAT IS GROUND IN REPEATEDLY BY TIRES CAN LEAD TO CLOGGING. THEREFORE, TRUCKS OR OTHER HEAVY VEHICLES SHOULD BE PREVENTED FROM TRACKING OR SPILLING DIRT ONTO THE PAVEMENT.

vi. DO NOT ALLOW CONSTRUCTION STAGING, SOIL/MULCH STORAGE, ETC. ON UNPROTECTED PAVEMENT SURFACE.

vii. NO WINTER SANDING. MECHANICAL SNOW AND ICE REMOVAL PREFERRED.

viii. DEICING IS PERMITTED ON PERVIOUS PAVEMENT IN THE WINTER. MINIMIZE APPLICATION OF SALT BY REDUCING THE APPLICATION BY 50% OVER TRADITIONAL PAVEMENT.

viii. WRITTEN AND VERBAL COMMUNICATION TO THE POROUS PAVEMENT'S FUTURE OWNER SHOULD MAKE CLEAR THE SPECIAL PURPOSE AND SPECIAL MAINTENANCE REQUIREMENTS SUCH AS THOSE LISTED HERE.

f. THE FOLLOWING REQUIREMENTS WILL HELP ASSURE THAT THE STONE INFILTRATION
SYSTEM IS MAINTAINED TO PRESERVE ITS EFFECTIVENESS:

i. INSPECTED AT LEAST TWICE ANNUALLY AND FOLLOWING ANY RAINFALL EVENT EXCEEDING 2.5 INCHES IN A 24 HOUR PERIOD.

ii. IF SYSTEM DOES NOT DRAIN WITHIN 72 HOURS FOLLOWING A RAINFALL EVENT, THEN A QUALIFIED PROFESSIONAL ENGINEER SHOULD ASSESS THE CONDITION OF THE STONE TRENCH TO DETERMINE MEASURES REQUIRED TO RESTORE INFILTRATION FUNCTION. INCLUDING, BUT NOT LIMITED TO, REMOVAL OF ACCUMULATED SEDIMENTS OR RECONSTRUCTION OF THE INFILTRATION TRENCH.

g. OWNERS SHALL PROVIDE A REPORT ON ACTIVITIES PERFORMED THROUGHOUT THE YEAR. REPORT SHALL INCLUDE DOCUMENTATION THAT PAVEMENT CLEANING IS ACCOMPLISHED PER THIS DOCUMENT AND A CERTIFICATION THAT THE SYSTEM CONTINUES TO FUNCTION AS DESIGNED.

Re: **Site Plan Review & Wetlands Conditional Use Permit Applications**
Proposed 2-story Building, 230 Commerce Way, Portsmouth, NH

Dear Beverly:

On behalf of 230 Commerce Way, LLC (owner/applicant), we are pleased to submit via the City of Portsmouth online permitting system the following information to support a request for a Site Plan Review and Wetland Conditional Use Permit for the above referenced project:

- One (1) full size & one (1) half size copy of the Site Plan Set last, dated May 24, 2022;
- Site Review Checklist dated, May 24, 2022;
- Drainage Analysis Memorandum, dated May 24, 2022;
- Long-Term Operation & Maintenance Plan, dated May 24, 2022;
- Fire Truck Turning Exhibit dated, May 24, 2022;
- Trip Generation Analysis Memorandum, dated May 24, 2022;
- Eversource Will Service Letter dated, May 24, 2022;
- Unitil Will Service Letter dated, May 12, 2022;
- 100' Wetland Buffer Impact Exhibit dated May 24, 2022;
- Green Building Statement, dated May 24, 2022;
- Application fee calculation form for the Site Review and Wetland Conditional Use Permit application fees;
- Cheek in the amount of $6,240.00 for the Site Plan Review & Wetland Conditional Use Permit application fee

The proposed project is located at 230 Commerce Way on the corner of Portsmouth Boulevard and Commerce way, on property identified as Map 216 Lot 1-5 on the City of Portsmouth Tax Maps. The existing site currently consists of a 3-story office building with a large associated parking lot. The proposed project consists of a new 2-story building for veterinary care uses within the limits of the existing parking lot, modifications to the parking lot, and associated site improvements. The associated site improvements include the site lighting, underground utilities, stormwater treatment/management system, and wetland buffer enhancements.

Land Use Permit Applications

Site Plan Review Permit

The project will require a Site Plan Review Permit for the site improvements described above in the project summary. The project has previously been before the Planning Board for Conceptual Consultation, and Conservation Commission and the Technical Advisory Committee for work sessions.

Wetland Conditional Use Permit

A portion of the proposed work is located in the 100-foot wetland buffer thus requiring a Conditional Use Permit per Section 10.1017 of the Zoning Ordinance. As a result of the project there is going to be a reduction of existing impervious area within the wetland buffer of approximately 5,070 SF. The project is also proposing 9,250 SF of buffer enhancement area.

Conditional Use Permit Criteria

Based on the above described and enclosed materials, the following addresses how the proposed project warrants the granting of a Wetland Conditional Use Permit by satisfying the following six (6) criteria for approval in Section 10.1017.50 of the Zoning Ordinance:

(1) The land is reasonably suited to the use, activity or alteration.

The land is currently a previously disturbed site which consists of an office building and parking lot and is suited for enhancement. The proposed project site lies partially within a previously wetland buffer area. The proposed project will result in impervious surface reduction in the buffer and buffer enhancement. Advanced stormwater treatment is also part of the proposed project which will improve the quality of the runoff to the wetland from the project site.

(2) There is no alternative location outside the wetland buffer that is feasible and reasonable for the proposed use, activity or alteration.

The placement of the proposed building is limited by the 75-foot side yard setbacks that are required in the Office Research (OR) zone. The proposed project design reduces the impervious surface within the 100' buffer and proposes to replace existing pavement and lawn areas with wetland buffer seed mix and plant native shrubs and trees.

(3) There will be no adverse impact on the wetland functional values of the site or surrounding properties;

There will be no adverse impact on the wetland functional values of the site as the existing condition is previously disturbed and consists of building, parking area and no existing stormwater treatment. The proposed project designs site and landscape plans enhance the previously disturbed buffer area given the existing condition and provide treatment of stormwater runoff where none currently exists.

(4) Alteration of the natural vegetative state or managed woodland will occur only to the extent necessary to achieve construction goals; and

The proposed project design proposes no alteration to any natural woodland or wetlands area. The area impacted consists of mainly of impervious surfaces. Any temporary disturbances of the wetland buffer for construction of the stormwater outlet and removal of existing pavement will be restored following construction.

(5) The proposal is the alternative with the least adverse impact to areas and environments under the jurisdiction of this Section.

The proposed project design is not an adverse impact to the site as it would enhance the buffer by reducing overall impervious surface on the site and improve water quality through stormwater treatment. Impervious surfaces have been reduced from the existing condition. The proposed project will reduce the impervious area within the 100-foot wetland buffer.

(6) Any area within the vegetated buffer strip will be returned to a natural state to the extent feasible.

The proposed project design within the vegetated buffer strip is limited to construction of the stormwater outlet from the stormwater collection and treatment system. The existing property has no stormwater treatment measures. The proposed project will collect and treat the onsite impervious surfaces prior to discharging to the on-site wetland. Implementing these treatment measures will help improve the water quality runoff discharging to the wetland. In order for this system to work, disturbances with the buffer strip are necessary. Areas temporarily disturbed for the construction of the outlet will be restored following construction. The landscape plan proposes restoring the disturbed areas within the foot wetland buffer with a wetland buffer seed mix, and the addition of several native trees and shrubs.

We respectfully request to be placed on the TAC meeting agenda for June 7, 2022. If you have any questions or need any additional information, please contact Neil Hansen by phone at (603) 294-9213 or by email at nahansen@tighebond.com.

Drainage Analysis

1.0 Project Description

The proposed project is located at 230 Commerce Way. The existing parcels includes a three (3) story office building with a footprint of approximately 16,650 SF with associated surface parking. The site is bound to the southeast by Portsmouth Boulevard, and two (2) commercial properties to the southwest and northwest. The topography of the site has high points along Commerce Way and slopes to the rear, southwest, portion of the site.

Runoff generated by the existing site flows to one (1) discharge point identified as Point of Analysis 1 (PA-1) on the enclosed Pre-Development Watershed Plan. PA-1 is an existing wetland complex in the rear of the site that collects the drainage from the existing commercial uses adjacent to the site.

The proposed project consists of the constructing of an additional 2-story building that has an overall footprint of approximately 12,500 SF with associated site improvements within the area of the rear parking lot of the existing site. The proposed site improvements include a stormwater management system providing treatment not only to the newly redeveloped areas but also to portions of the existing impervious areas on site.

Portions of the proposed project are location within the local wetland buffer setback, and as part of the redevelopment there will be a decrease of impervious area of approximately 5,070 SF within the buffer as well as an overall decrease of impervious area to the overall site.

2.0 Drainage Analysis

2.1 Calculation Methods

The parcels on-site watersheds were analyzed under this section. The design storms analyzed in this study are the 2-year, 10-year, 25-year and 50-year 24-hour duration storm as per NHDES AoT Regulations (Env-Wq 1500). The stormwater modeling system, HydroCAD 10.0 was utilized to predict the peak runoff rates from these storm events. A Type III storm pattern was used in the model. The rainfall data for these storm events were obtained from the data published by the Northeast Regional Climate Center at Cornell University for the extreme precipitation estimates.

The time of concentration was computed using the TR-55 Method, which provides a means of determining the time for an entire watershed to contribute runoff to a specific location via sheet flows, shallow concentrated flow and channel flow. Runoff curve numbers were calculated by estimating the coverage areas and then summing the curve number for the coverage area as a percent of the entire watershed.

2.2 Pre-Development Calculations

As stated above the stromwater runoff characteristics of the site were analyzed at one distinct point of analysis. This point of analysis being the existing wetland complex in the rear of the site identified as PA-1. The limits of the contributing watershed area (Pre-1.0) of the pre-development condition studied in this analysis are depicted the enclosed plan entitled "Pre-Development Watershed Plan", Sheet C-801.

2.3 Post-Development Calculations

The stromwater runoff characteristics of the pre-development conditions were analyzed at same distinct point of analysis (PA-1). However, in the post-development condition the overall contributing watershed was split into two (2) sub watershed areas (Post-1.0 & Post-1.1). Though the two (2) post-development watershed areas ultimately drain to the same point of analysis (PA-1), the proposed drainage system was designed to capture runoff from the contributing impervious areas (Post-1.1) and direct the flow through a proprietary stormwater treatment unit prior to discharging the runoff to PA-1. Post-development watershed areas (Post-1.0 & Post-1.1) of the post-development condition are depicted the enclosed plan entitled "Post-Development Watershed Plan", Sheet C-802.

2.5 Stormwater Treatment

The stormwater management system has been designed to provide stormwater treatment as required by the City of Portsmouth Site Review Regulations and the NHDES AoT Regulations (Env-Wq 1500).

Runoff generated from impervious areas will be treated by a Contech Jellyfish (JF8) stormwater treatment system. The surface parking area will receive pre-treatment via deep sump catch basins prior to discharging to the Jellyfish unit. Roof runoff is to be discharged directly in the proposed closed drainage system prior to being directed to the Contech stromwater treatment unit.

The Contech stormwater treatment unit was sized to treat the one (1) inch storm per the NHDES AoT Regulations for water quality flow (WQF), as shown on the enclosed NHDES WQF worksheet.

3.0 Conclusion

The proposed project will result in a reduction in post-development peak runoff rates from the pre-development condition. The impervious area resulting from the proposed project will be treated by the proposed stormwater treatment system.

GENERAL CALCULATIONS - WQV and WQF
(optional worksheet)

This worksheet may be useful when designing a BMP **that does not fit into one of the specific worksheets already provided** (i.e. for a technology which is not a stormwater wetland, infiltration practice, etc.)

Water Quality Volume (WQV)

2.65	ac	A = Area draining to the practice
1.86	ac	A_I = Impervious area draining to the practice
0.70	decimal	I = Percent impervious area draining to the practice, in decimal form
0.68	unitless	Rv = Runoff coefficient = 0.05 + (0.9 x I)
1.81	ac-in	WQV= 1" x Rv x A
6,559	cf	WQV conversion (ac-in x 43,560 sf/ac x 1ft/12")

Water Quality Flow (WQF)

1	inches	P = Amount of rainfall. For WQF in NH, P = 1".
0.68	inches	Q = Water quality depth. Q = WQV/A
97	unitless	CN = Unit peak discharge curve number. CN =1000/(10+5P+10Q–10*[Q^2 + 1.25*Q*P] $^{0.5}$)
0.3	inches	S = Potential maximum retention. S = (1000/CN) - 10
0.068	inches	Ia = Initial abstraction. Ia = 0.2S
4.3	minutes	T_c = Time of Concentration
615.0	cfs/mi^2/in	q_u is the unit peak discharge. Obtain this value from TR-55 exhibits 4-II and 4-III.
1.736	cfs	WQF = q_u x WQV. Conversion: to convert "cfs/mi^2/in * ac-in" to "cfs" multiply by 1mi^2/640ac.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Rockingham County, New Hampshire

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

Maintenance of the following items shall be recorded:

- Litter/Debris Removal
- Landscaping
- Catch Basin
- Pavement Sweeping
- ADS Water Quality Unit

The following maintenance items and schedule represent the minimum action required. Periodic site inspections shall be conducted, and all measures must be maintained in effective operating condition. The following items shall be observed during site inspection and maintenance:

- Inspect vegetated areas, particularly slopes and embankments for areas of erosion. Replant and restore as necessary
- Inspect catch basins for sediment buildup
- Inspect site for trash and debris

1.3 Overall Site Operation & Maintenance Schedule

Maintenance Item	Frequency of Maintenance
Litter/Debris Removal	Weekly
Pavement Sweeping - Sweep impervious areas to remove sand and litter.	Annually
Landscaping - Landscaped islands to be maintained and mulched.	Maintained as required and mulched each Spring
Catch Basin (CB) Cleaning - CBs to be cleaned of solids and oils.	Bi-Annually
Jellyfish Treatment Unit - Visual observation of sediment levels within system - Cleaned (pumped and pressure washed) - Per manufacture recommendations	 - Quarterly and after major storm events. - Annually - See manufactures Jellyfish Treatment Unit Inspection and Maintenance Guide, enclosed

1.3.1 Disposal Requirements

Disposal of debris, trash, sediment, and other waste material should be done at suitable disposal/recycling sites and in compliance with all applicable local, state and federal waste regulations.

1.4 Jellyfish Treatment Unit Maintenance Requirements

1.5 Snow & Ice Management for Standard Asphalt and Walkways

Snow storage areas shall be located such that no direct untreated discharges are possible to receiving waters from the storage site (snow storage areas have been shown on the Site Plan).

Section 2
Annual Updates and Log Requirements

The Owner and/or Contact/Responsible Party shall review this Operation and Maintenance Plan once per year for its effectiveness and adjust the plan and deed as necessary.

A log of all preventative and corrective measures for the stormwater system shall be kept on-site and be made available upon request by any public entity with administrative, health environmental or safety authority over the site.

Copies of the Stormwater Maintenance report shall be submitted to the City of Portsmouth DPW on an annual basis.

Re: **Trip Generation Analysis**
Proposed 2-Story Building, 230 Commerce Way, Portsmouth, NH

Dear Eric:

Tighe & Bond has performed a trip generation analysis related to the construction of a proposed two-story 25,000 SF (GFA) building that will consist of a Veterinary Care use located at 230 Commerce Way in Portsmouth, NH. Port City Veterinary Referral Hospital ("Port City") will be relocating from its current 15,000 SF facility located at 215 Commerce Way.

This analysis was performed utilizing Institute of Transportation Engineers (ITE) Trip Generation Manual, 11th Edition. For the purposes of analysis, we have calculated the trip generation for the the veterinary use utilizing the average peak AM and PM hour rates for ITE Land Use Code 640 – Animal Hospital/Veterinary Clinic, which are 3.64 and 3.53 per 1,000 SF, respectively.

	Veterinary Care (ITE LUC 640)
Weekday AM Peak Hour	
Trips Entering (67%)	61
Trips Exiting (33%)	30
Total Vehicle Trips	**91**
Weekday PM Peak Hour	
Trips Entering (40%)	35
Trips Exiting (60%)	53
Total Vehicle Trips	**88**

As depicted above, the proposed Veterinary Care use will result in approximately 1.5 additional vehicle trips every minute during the Weekday AM and PM peak hours which is anticipated to have minimal impact to the surrounding roadway network during these peak times.

In addition to the above trip generation calculations, the subject site has previously been reviewed through the City of Portsmouth Site Review process with respect to traffic-related impacts.

- In the September 1999, CLD Consulting Engineers, Inc. (CLD) prepared a *Traffic Impact Evaluation* for full build out of the Portsmouth Office Park with 244,000 square feet of Office use.

- In October 2005, AMES MSC prepared a *Traffic Impact Evaluation* as part of the Homewood Suites project located on Portsmouth Boulevard. This evaluation replaced 19,000 square feet of the Office use that was evaluated in the 1999 CLD *Traffic Impact Evaluation* with a 108-room hotel. With this evaluation, there was 225,000 SF of Office use remaining from the prior CLD study that was not yet constructed.

- In June 2015, Tighe & Bond prepared a *Traffic Evaluation* as part of an Office Building project located 75 Portsmouth Boulevard. This evaluation reviewed impacts associated with the construction of 112,000 SF of Office use at 75 Portsmouth Boulevard. This memorandum evaluated the proposed 112,000 SF of office to be built plus the 113,000 SF of remaining office use from the CLD study for the full build out of Portsmouth Office Park. **It should be noted that only 67,000 SF of the proposed 112,000 SF was ultimately built.**

- The proposed 25,000 SF Veterinary Care use has a peak hour generator that is approximately the equivalent of a 60,000 SF Office use. Thus, the peak hour trip generation associated with the Veterinary Care use is already accounted in the 2015 Tighe & Bond *Traffic Evaluation* described above.
    - With only 67,000 SF of the approved 112,000 SF of Office use being constructed at 75 Portsmouth Boulevard, a 45,000 SF balance of Office use previously anticipated to be constructed remains from the 2015 Tighe & Bond evaluation.
    - Applying this 45,000 SF balance to the Veterinary use equivalent of 60,000 SF leaves a surplus of 15,000 SF of Office use. This 15,000 SF surplus would then be subtracted from the 113,000 SF of Office use remaining for the full build out of Portsmouth Office Park as described above. In summary, a balance of 98,000 SF of Office use accounted for in the June 2015 Traffic Evaluation still remains not yet constructed for the full buildout of Portsmouth Office Park.

Sustainability Narrative for Planning Board

Proposed Office/Animal Clinic Building

25 Portsmouth Boulevard, Portsmouth NH

Introduction

25 Portsmouth Boulevard is a core and shell construction project located in Portsmouth that will accommodate office and animal clinic program components. It will follow the U.S. Green Building Council under the LEED v4 Building Design + Construction for Core & Shell. The project team expects the project shows sufficient potential to reach a minimum of Certified level LEED certification. This shall be accomplished through various qualities attributed to both the project context, as well as its design merits, and client (and tenant) initiatives described in the following sections.

Integrative Design

Integrative Process

During the preliminary design phases, the team studied site conditions, basic envelope attributes, energy-related systems, and water-related systems to identify potential synergies across disciplines and building systems.

Location and Transportation

Sensitive Land Protection

The project site is not located on prime farmland, not parkland, not on previously undeveloped land, not designated as habitat for endangered species, and not in proximity to wetlands or water bodies. The project site is in a previously developed parking lot area surrounded by other similar scale office properties

Access to Quality Transit

The planned project is 100 feet from Portsmouth Avenue and Shearwater COAST #2 bus stop. The site is also a 6 minute drive to Portsmouth International Airport.

Bicycle Facilities

The project will provide numerous bicycle racks for short-term storage outside of the project building for occupants' and visitors' use. Additionally, if the tenant choses to provide, the building will contain shower and locker/changing facilities for its regular occupants.

Green Vehicles

Hybrid vehicle preferred parking spaces and charging stations designated for use by plug-in electric vehicles are being explored.

Sustainable Sites

Construction Activity Pollution Prevention

A project-specific erosion and sedimentation control plan will be created with the objective of preventing loss of soil during construction, sedimentation of storm sewers, and pollution of the air with dust and particulate matter. The contractor shall be required to document compliance with the ESC throughout the construction process.

Site Assessment

A site assessment including topography, hydrology, climate, vegetation, soils, human uses, and human health effects will be performed and will inform the design of the project as appropriate.

Site Development –Protect or Restore Habitat

The project is built on a site with no greenfield area. Greenspace with a variety of native or adaptive vegetation, trees, and soil restoration will be provided.

Open Space

The project will provide some open space within the site area. The outdoor space will be physically accessible and includes pet and pedestrian-oriented paving with physical site elements that accommodate outdoor social activities.

Rainwater Management

The proposed stormwater management system will be designed to comply with the City of Portsmouth standards.

Heat Island Reduction

The solar reflectance index on the light-colored and reflective low sloped roofing, which will cover more than 75% of the overall building roof surface

Light Pollution Reduction

All exterior lighting shall automatically turn off when sufficient daylight is available. All building façade/landscape lighting shall be automatically shut off between midnight/business closing, and 6am/business opening.

Tenant Design and Construction Guidelines

Tenant design and construction guidelines will be issued to the building tenant to educate about implementing sustainable design and construction features in their tenant improvement fit-out. These guidelines will encourage building tenants to earn LEED ID+C v4 Certification for their interior fit-out.

Water Efficiency

Outdoor Water Use Reduction

Plant selection and an efficient irrigation system will reduce the potable water used for irrigation by at least 75% from a calculated midsummer baseline case as delineated under Option 2 for Reduced Irrigation.

Indoor Water Use Reduction

Water-efficient plumbing fixtures will reduce domestic water below the LEED water use baseline, shown through the usage-based calculations
· All toilets will utilize 1.1 gpf low flush valves
· All urinals will utilize 0.125 gpf ultra low flow flush valves
· All lavatories will utilize 0.35 gpm with metering tempering faucets
· All showers will utilize 1.5 gpm low flow shower heads
· All kitchen sinks will utilize 1.5 gpm faucets

Building – Level Water Metering & Water Metering

Permanent water meters will be installed which will measure the total potable water use for the building and its associated grounds.

Energy and Atmosphere

Fundamental Commissioning And Verification & Enhanced Commissioning

A third-party Commissioning Agent may be engaged before the end of the design development phase, and will review and comment on the project Owner's Project Requirements (OPR), Basis of Design, draft Design Development & Construction Documents. Additionally, he/she will develop and implement a Commissioning Plan for the building HVAC, plumbing, lighting systems and envelope, review construction submittals, and then issue a summary Commissioning Report. Finally, the CxA will participate in training for the building operational staff.

In addition to the Fundamental scope listed above, the CxA verifies the following for mechanical, electrical, plumbing, energy systems, and building envelope; these tasks shall be included in the OPR and BOD:

- Review contractor submittals.
- Verify Inclusion of systems manuals and operator training requirements in the construction documents
- Verify systems manual updates and delivery
- Verify operator and occupant training delivery and effectiveness
- Verify seasonal testing
- Review building operations 10 months after substantial completion.
- Develop an on-going commissioning plan

Minimum Energy Performance & Optimize Energy Performance

An energy model will be developed to describe how an energy-efficient building envelope and base building mechanical systems will reduce the building design performance rating to below the baseline building performance rating. This will continue to evolve through the design phase and align with the project design and any additional energy savings we are able to confirm as the design further develops.

Building-Level Energy Metering

Permanently installed meters will measure total building energy consumption

Fundamental Refrigerant Management & Enhanced Refrigerant Management

Building refrigerants will be selected to minimize the emission of compounds that contribute to ozone depletion and global climate change. Building refrigerants will not exceed maximum threshold allowances for contributions to ozone depletion and global warming potential. Our core and shell project will likely not include all HVAC associated with anticipated work by the tenant.

Green Power and Carbon Offsets

The Kane Company *is investigating options* to engage in a contract to purchase building's energy from green power, carbon offsets, or renewable energy certificates for a minimum of five years.

Materials and Resources

Storage and Collection of Recyclables

A Recycling Staging Room at the building loading area will support a building-wide recycling program for paper, corrugated cardboard, glass, plastic, and metal.

Construction and Demolition Waste Management Planning

A construction and demolition waste management plan will be developed prior to the start of construction which will identify at least five materials targeted for diversion, whether these materials will be separated or comingled, and will approximate a percentage of the overall project waste that these will represent, at least 50% of the construction and demolition debris and a minimum of four material streams will be diverted from landfill and incineration facilities and redirected instead for recycling to the manufacturing process and reusable materials to appropriate sites.

Building Product Disclosure and Optimization Environmental Product Declarations, Sourcing of Raw Materials, and Material Ingredients

The design team shall proactively seek and track materials and products that comprehensively address these material and resource concerns during the design phase. Priority will be given to those items that comprise a high percentage of the project's overall material cost, and Low-Emitting Materials.

Minimum Indoor Air Quality Performance

Building HVAC systems will meet the minimum requirements of Sections 4 through 7 of ASHRAE Standard 62.1-2010 - Ventilation for Acceptable Indoor Air Quality, based on anticipated future tenant requirements.

Environmental Tobacco Smoke (ETS) Control

Smoking will be prohibited inside the building and within 25 feet of the entire building perimeter.

Enhanced Indoor Air Quality Strategies

To promote a healthy indoor air quality, permanent entryway systems or appropriate roll-up mats will be installed at all regularly used building entrances; any room with hazardous gases or chemicals will be negatively pressured to contain such elements. MERV 13 or higher filters will be provided in all ventilation systems providing outdoor air to occupied spaces.

Low-Emitting Materials

The design team shall proactively seek and track products that comply with the low-emitting requirements during the design phase

Construction IAQ Management Plan

An indoor air quality plan during construction will require the builder to follow industry best-practices such as SMACNA IAQ Guidelines for Occupied Buildings Under Construction, protecting absorptive materials stored on site from moisture

Daylight

The project will provide window shading devices, and prioritize daylighting strategies for regularly occupied spaces.

Quality Views

The design of the building envelope and floor plan is exploring prioritizing quality view strategies that would allow tenants to design their fit-out with a direct line of sight to the outdoors in at least 75% of all regularly occupied areas.

Innovation

Innovation

The project will target this category by pursuing and combination of Innovation and Pilot Credits recognized by USGBC. The strategies listed below are currently being considered:

· Innovation: Purchasing – Lamps – The based building lighting shall be selected to focus on low- or no mercury-containing lamps. A purchasing plan will be implemented for both indoor and outdoor fixtures.

· Innovation: Green Education. The project will consider utilizing the building's sustainable feature as an opportunity to educate tenants and visitors on the value of green building.

LEED Accredited Professional

The project team includes several LEED Accredited Professionals

Memo

TO: Conservation Commission Members
FROM: Peter Britz, Environmental Planner
DATE: June 3, 2022
SUBJ: June 8, 2022 Conservation Commission Meeting

2255 Lafayette Road

This application proposes to convert an existing fast food restaurant site into a retail fueling station and a convenience store/sandwich shop with drive-through window and five fuel dispenser island and associated paving parking and stormwater system upgrades for the entire site. The overall disturbance in the wetland buffer is 33,555 square feet which consists primarily of previously disturbed paved site areas.

1. The land is reasonably suited to the use activity or alteration.
Given that the site is currently paved and has a structure on it this project seeks to upgrade the site. The site is not seeking to expand the impact in the buffer so the land is reasonably suited to the use.

2. There is no alternative location outside the wetland buffer that is feasible and reasonable for the proposed use, activity or alteration.
The site as it exists is paved within and close to the edge of wetland. There is no location on this property where the project could be completed outside of the buffer.

3. There will be no adverse impact on the wetland functional values of the site or surrounding properties.
The applicant is proposing to reduce the amount of impervious surface 9,124 square feet on this previously developed site. This reduction in impervious surface combined with the addition of enhanced stormwater treatment reduces the overall site impacts for this site and surrounding properties.

4. Alteration of the natural vegetative state or managed woodland will occur only to the extent necessary to achieve construction goals.
This project is proposing an extensive landscape plan for the interior of the site. The area at the rear of the site which is being converted from pavement to proposed loam and seed could be enhanced further with the addition of wetland buffer plantings and/or a wetland seed mix. Additionally, the applicant should be clear in their application to adhere to the City's regulations for fertilizer use according to section 10.1018.24.

5. The proposal is the alternative with the least adverse impact to areas and environments under the jurisdiction of this section.
This site proposes reductions in impervious surfaces and enhanced stormwater treatment as a less impacting alternative than what is existing.

6. Any area within the vegetated buffer strip will be returned to a natural state to the extent feasible.
As stated above the buffer planting stating loam and seed should be revisited to include more appropriate wetland buffer plantings. The plantings could be mowable but staff recommends they look towards a reduced mowing cycle, i.e. annual or twice annual to enhance buffer function. Additionally, the buffer could be enhanced with specific plantings of shrubs which work for this site.

Recommendation: Staff recommends approval of the project with three stipulations:

1. That the plans match the City's fertilizer standards per section 10.1018.24.
2. That the applicant provide a wetland buffer seed mix and reduced mowing frequency for the areas labelled for loam and seed on the plan.
3. That the applicant consider some type of wetland edge signage as appropriate for this site.

70 Pleasant Point Drive

This is an application to replace an existing home with a new home on the same lot. The proposed structure is still in the buffer but the plan calls for it to be pulled back from the shoreline along with a new driveway configured to be made of pervious pavers also further from the edge of the shoreline.

1. The land is reasonably suited to the use activity or alteration.
The site has an existing single family home on it currently. The applicant proposes to move the home further back from the edge of wetland but the size of the patio has expanded. While there is a table showing a 96 square foot reduction of impervious surface on the property it is not clear what the overall change in buffer impact is. Clearly moving the house back further from the buffer is a reduction of structure impact but the application does not appear to show the size of the buffer impact for all surfaces in the buffer. The removal of invasive species and planting plan are definitely an enhancement to the project and appropriate or this site.

2. There is no alternative location outside the wetland buffer that is feasible and reasonable for the proposed use, activity or alteration.
The site as it exists is a single family lot and the applicant has worked to move the house further back from the wetland buffer. The new location of the house does appear appropriate. It is hard to determine the size of the other impacts in the buffer. Additionally, there is a dock proposed on the site with no details about how the stairs connect to the dock through the saltmarsh. Similarly the plan shows a bioretention basin in the buffer. It is not clear whether this could be located outside of the buffer and what the impact of the outfall will be flowing on tidal waters.

3. There will be no adverse impact on the wetland functional values of the site or surrounding properties.
The applicant is proposing to reduce the amount of impervious surface 96 square feet and enhance the vegetation on the site with a thoughtful invasive species removal plan and planting plan. While it does not appear that this project will create an adverse impact on the site it is not clear how large the patio areas are and whether they are, as designed an enhancement to the site overall. A more detailed buffer impact plan describing all of the impacts in the buffer would be helpful to better understand the project.

4. Alteration of the natural vegetative state or managed woodland will occur only to the extent necessary to achieve construction goals.
This project is proposing an extensive landscape plan and invasive species removal plan. The overall landscaping for the site shows some beneficial plantings. More information about the existing lawn area versus the proposed would be helpful to evaluate the overall site. For instance is there a 25' vegetated buffer provided throughout the site?

5. The proposal is the alternative with the least adverse impact to areas and environments under the jurisdiction of this section.
The applicant proposes to provide an invasive species management plan, new pervious areas and move the house further from the edge of wetland which are all positive steps. More detail is needed to better understand the impacts overall.

6. Any area within the vegetated buffer strip will be returned to a natural state to the extent feasible.
The invasive species removal plan and native planting plan seeks to accomplish this. It would be helpful to see whether the 25' vegetated buffer is provided throughout the site and get more details on the impacts in the buffer as shown on the plans.

Recommendation: Staff believes there are more questions for the applicant, addressed above, which will help the Commission get a better understanding of the project. In addition, a site walk would be helpful to see the

site and understand the proposed changes. Further, the Commission will be asked to comment on the State Wetland Permit and the Commission would benefit from reviewing the NHDES application along with the Wetland Conditional Use Permit. For these reasons staff recommends the applicant proceed with a work session or postpone the application in anticipation of more information and a site walk.

81 Taft Road

This is an application to add an addition to an existing home on Taft Road. This is very minor addition in the front yard of this home.

1. The land is reasonably suited to the use activity or alteration.
Given the small size of the addition and the fact that it is in an existing lawn area on the opposite side of the street from the wetland in question this is a reasonable request.

2. There is no alternative location outside the wetland buffer that is feasible and reasonable for the proposed use, activity or alteration.
There is not an alternative location for the addition given the home exists, this is a reasonable request.

3. There will be no adverse impact on the wetland functional values of the site or surrounding properties.
There will be no adverse effect from the proposed addition.

4. Alteration of the natural vegetative state or managed woodland will occur only to the extent necessary to achieve construction goals.
This project is proposing an addition 17 of square feet of which are in the buffer. It is not clear whether the maple tree shown will be able to be saved when this addition is complete.

5. The proposal is the alternative with the least adverse impact to areas and environments under the jurisdiction of this section.
This is a very small impact in the buffer in an area of lawn.

6. Any area within the vegetated buffer strip will be returned to a natural state to the extent feasible.
The lawn area will be lost to the addition but it will have little effect on the wetland across the street.

Recommendation: Staff recommends approval as presented.

11 Fletcher Street

This is an application to construct a new single family home on a residential lot.

1. The land is reasonably suited to the use activity or alteration.
The applicant has worked to keep the house including the site grading outside of the wetland buffer making the site reasonable for this project.

2. There is no alternative location outside the wetland buffer that is feasible and reasonable for the proposed use, activity or alteration.
In consideration of the nearby adjacent home and site topography the applicant has proposed the drainage to move to the rear corner of the site to avoid impacts to the neighboring property. The stormwater design does not anticipate regular flow but needs this swale for large rain events.

3. There will be no adverse impact on the wetland functional values of the site or surrounding properties.
The way the project is designed the majority of the stormwater will be infiltrated onsite. This swale outlet will accommodate large rain events and will not have an adverse effect on the adjacent wetland.

4. Alteration of the natural vegetative state or managed woodland will occur only to the extent necessary to achieve construction goals.

This project is proposing to outlet the stormwater pipe to the wetland buffer. In addition, the applicant is proposing to install some wetland buffer plantings adjacent to the proposed swale.

5. The proposal is the alternative with the least adverse impact to areas and environments under the jurisdiction of this section.
There will be a temporary disturbance from the installation of the drain line and a small disturbance from the swale but no impervious surface is proposed with this project.

6. Any area within the vegetated buffer strip will be returned to a natural state to the extent feasible.
The applicant is proposing to install some wetland buffer plantings and to restore the site after the temporary disturbance.

Recommendation: Staff recommends approval as presented.

230 Commerce Way

This is an application to construct a new two story building for veterinary care within an existing parking lot. There are modification to the parking lot proposed which require a small impact in the buffer but overall there is a large area of parking lot being removed from the buffer making the site more conforming to the wetland buffer regulations.

1. The land is reasonably suited to the use activity or alteration.
This project proposes to largely enhance the buffer through the removal of parking areas and plantings in the wetland buffer.

2. There is no alternative location outside the wetland buffer that is feasible and reasonable for the proposed use, activity or alteration.
This project proposes a net reduction in paving in the wetland buffer and as such is a feasible and reasonable location for the project.

3. There will be no adverse impact on the wetland functional values of the site or surrounding properties.
The way the project is designed the result will be a net improvement to wetland functional value for this and surrounding properties.

4. Alteration of the natural vegetative state or managed woodland will occur only to the extent necessary to achieve construction goals.
This project is proposing to reduce pavement areas and add new wetland buffer plantings which is a net benefit for the site.

5. The proposal is the alternative with the least adverse impact to areas and environments under the jurisdiction of this section.
There will be some temporary disturbances from this project but overall the project should result in a net improvement to the wetland buffer.

6. Any area within the vegetated buffer strip will be returned to a natural state to the extent feasible.
The applicant is proposing to expand planted areas in the wetland buffer by 9,250 square feet

Recommendation: Staff recommends approval as presented.
