October 23, 2018

PEASE TRADEPORT WATER SUPPLY UPDATE

Demonstration Filter Performance

The City's engineering consultant continues to sample the performance of the activated carbon filters based on the amount of water treated. The graphic below shows the most recent source water sampling and treated filter water quality results for the PFOS and PFOA. (Note that the October 19, 2018 update incorrectly report Filter #1 Effluent PFOA at 0.04 ppb, it should have been 0.004 ppb)

Pease Tradeport Water System
Activated Carbon Treatment
Demonstration Project Sampling:

October 2, 2018 Results

Source Water: Harrison and Smith Wells

Well	PFOS	PFOA
Combined Influent	0.022	0.015

Filter #1 — 325 Million Gallons Filtered since September 2016

Filter #1 Effluent

PFOS	PFOA
ND	0.004

Filter #2 — 96 Million Gallons Filtered since April 23, 2018

Water To Distribution System

PFOS	PFOA
ND	ND

Notes: All samples in parts-per-billion (ppb)
ND = Non Detect
All samples collected by Weston & Sampson and analyzed by Maxxam Laboratory

The activated carbon demonstration filters for the Harrison and Smith wells have been on line since September 2016. As of October 2, 2018, 325 million gallons of water from these two

wells has been treated through the activated carbon F400 Calgon Filtrasorb Filter media in Filter Number 1. New carbon was installed on Filter Number 2 during the week of March 26, 2018 due to sample result trends showing that some of the 23 PFAS compounds being sampled were beginning to pass through the first filter. This was an early indicator that the filter media was starting to reach its useful life. Based on other operating systems like ours this is what we expected to see. It has also been pointed out by researchers, such as Dr. Higgins from the Colorado School of Mines, that, "measurable PFASs such as PFBA, rather than PFOS or PFOA, could be monitored to inform the potential for breakthrough of these shorter-chain PFASs as well as polyfluorinated and PFOS-like PFASs." Therefore, the City is currently utilizing the short chain PFBA compound as a measure of the need for filter changeouts. Additionally, the most recent sampling shows for the first time that one of the two compounds with a health advisory, PFOA, is now starting to come through the first filter at an estimated level of 4 parts per trillion. The second filter continues to show non-detect for this compound.

As mentioned in the previous updated, with the confirmation that PFBA has started to pass through the second filter, the City's consultant has recommended that we replace the carbon in both filters. We are currently in the process of scheduling work to replace the carbon in both filters either the last week of October or the first week of November.

All samples collected are analyzed by Maxxam laboratories, the same laboratory that has been performing the Pease well PFAS analysis since 2014. Data for the Pease Well sampling is uploaded to the City's website when it is validated by the Air Force's consultant and sent to the City. A summary of the data for the Pease Well Carbon Treatment Demonstration Project is provided on the City's website.

ONGOING WATER QUALITY MONITORING AND UPDATES

The Air Force's consultant continues to perform routine sampling of the water supply wells in the Pease water system. In addition to these water supply wells, the Air Force's consultant samples other monitoring wells in the surrounding area to track the aquifer and monitor for any PFAS moving toward the supply wells. Currently, with the demonstration filters on line, the supply wells are sampled monthly and eleven monitoring wells are sampled quarterly. Sampling data is posted on the City's website once it has been validated by the Air Force's engineering consultant. Information is also posted on the City's website for the City of Portsmouth's PFAS sampling program.

The City was recently informed that the September round of sampling showed that the combined PFOS/PFOA in the Harrison Well exceeded the EPA's Lifetime Health Advisory (LHA) for the first time, with a sample result of 75 ppt. This well is currently going through the GAC treatment facility, so no water exceeding this standard is being delivered to Pease Tradeport customers, in fact, it continues to be non-detect. Additionally, the City has requested that the Air Force provide a more detailed analysis of any trends in data they see with respect to the potential that levels may continue to rise. When we get that information we will provide it in our updates.

FINAL TREATMENT SYSTEM DESIGN

Rendering of Proposed Drinking Water Treatment Facility Upgrade – Grafton Road

The City of Portsmouth and the United States Air Force have recently signed their latest agreement to treat perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) from water supplied by the Smith, Harrison and Haven Wells serving the Pease Tradeport drinking water system. The agreement will provide the City with up to $14.3 million to reimburse the cost of construction of the final treatment system for all three wells, which will include a dual filtration system consisting of resin and granular activated carbon filters. We anticipate bidding the project this fall with construction beginning in the spring of 2019.

REVIEW OF OTHER MUNICIPAL WATER SYSTEMS TREATING PFAS COMPOUNDS

The City's engineering consultant has been gathering information on drinking water systems located across the country that are dealing with Per- and Polyfluoroalkyl Substances (PFAS) contamination of their water supplies. Preliminary findings of their assessment were summarized in the City's April 2018 Pease Tradeport Water Supply Update. Updated information is anticipated soon and will be posted when the report is complete.

EPA HEALTH ADVISORY AND NEW HAMPSHIRE DES REGULATIONS

In May 2016, the EPA issued a Lifetime Health Advisory of 0.070 µg/L (micrograms per liter) for Perfluorooctanoic Acid (PFOA) and Perfluorooctane Sulfonate (PFOS). The State of New Hampshire is currently working on Setting/Reevaluating Standards (Drinking Water Maximum Contaminant Levels) for: – PFOA – PFOS – PFNA – PFHxS, and they will initiate rulemaking by January 1, 2019.

Notes:

Grey text indicates the parameter was not analyzed or not detected.

All concentrations in µg/L - micrograms per liter (ppb)

J - The result is an estimated value.

B - Detected in Blank.

USEPA - Environmental Protection Agency

NA - Not Analysed or Not Applicable

ND - Not detected

— - No Health Advisory available

- Denotes 'B' value, detected in blank

- Denotes raw water influent sample

- Denotes short chain compound
