# New Hampshire's Housing Supply: Current Estimates and Trends

**2021 saw an 11% increase in building permits issued statewide. A slight decrease in single-family units permitted was offset by a 35% increase in permits for multi-family units.**

New Hampshire's housing supply increased by an estimated 4,937 units in 2021, an 11.0% increase over 2020, when the housing stock increased by 4,446. This continues a long-term trend since 2011 in which the number of new dwellings has grown each year, with exceptions only in 2013 and 2020. However, total current building activity is still only slightly more than half of the peak level in the early 2000s. The following graph shows the number of housing units for which permits were issued each year since 2001.

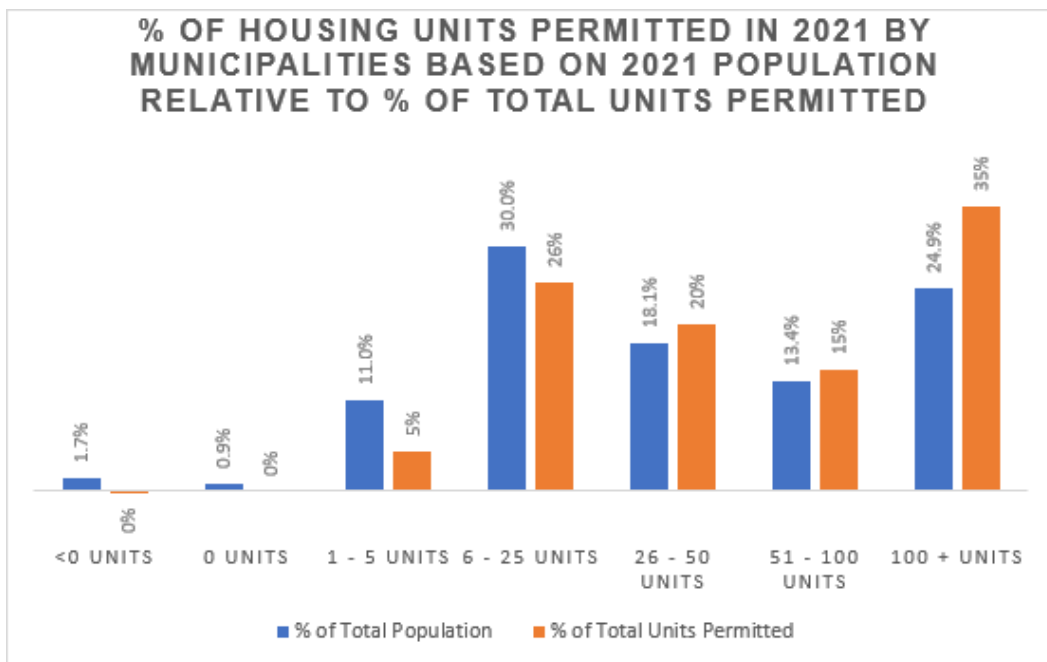

Statewide there was a slight decrease in the number of permits issued for single-family homes, from 2,631 in 2020 to 2,603 in 2021. At the same time, permits were issued in 2021 for 2,204 new housing units in multi-family buildings, an increase of 34.8% from the previous year.

While the number of housing units permitted by municipalities in 2021 is an increase over the number of units permitted in recent years, it continues to fall short of what is needed to meet the demand of New Hampshire’s workforce and to continue our state’s economic growth. According to projections contained in the forthcoming State Housing Needs Assessment produced by Root Policy Research for New Hampshire Housing, there is a need for 66,538 new housing units by 2030, including 59,934 new year-round housing units to accommodate projected population growth and put the state on a path towards a balanced market (5% rental vacancy rate and 2% ownership vacancy rate) by 2040.

If the number of housing units permitted on a yearly basis were to continue to increase by 9.5% each year (the average rate of increase since 2011), the state would be in line to produce 76,646 new housing units by 2030. However, this is far from a guarantee, as it would require permitting levels to exceed those seen in New Hampshire prior to the early 2000s. Governor Sununu’s \$100 million InvestNH housing initiative will help reach this goal, but we are unlikely to see how much impact this initiative is having on permitting levels before the release of next year’s 2022 Housing Unit Supply Report. In a positive development, assuming the upward trend in production levels continues in 2022 and 2023, the state is on track to meet the goal of the New Hampshire Council on Housing Stability 2021-2024 Strategic Plan, which established a goal of producing 13,500 new housing units by 2024 or 4,500 housing units per year.

A closer look at the 2021 permit data shows that the largest communities in the state are permitting a greater share of the state’s total housing units than their existing share of the population. Overall, just 17 communities, representing 7.3% of the municipalities in the state but 38.3% of the state’s population, were responsible for 50% of the housing units permitted in 2021. The remaining 217 communities in the state, comprising 61.7% of the state’s population, permitted the remaining 50% of housing units.

The above graph illustrates the share of housing units permitted by communities relative to their share of the state’s total population. For instance, the communities which each permitted more

than 100 units represent 24.9% of the state's population but permitted 35% of the units for 2021, while the communities which permitted 5 or fewer units represent 13.6% of the state's population but permitted only 5% of the statewide total of units.

Overall:

- 7 communities permitted 100+ units in 2021: Merrimack (618), Nashua (376), Londonderry (200), Rochester (152), Concord (134), Manchester (124), and Epping (114). These seven communities accounted for 35% of all units permitted in 2021.
- 10 communities permitted 51 – 100 units
- 28 communities permitted 26 – 50 units
- 97 communities permitted 6 – 25 units
- 76 communities permitted 1 – 5 units
- 8 communities permitted 0 units in 2021
- 8 communities saw a decrease in their housing inventory due to demolitions in 2021

Statewide, single-family homes comprised 52.7% of permits issued in 2021, down from 59.2% in 2020. Multi-family units comprised 44.7% of the total, and manufactured housing units were 2.6% of the total.

The number of multi-family permits issued increased by 569 compared to 2020, while the number of single-family permits decreased by 28. As of 2022, the total housing supply in the state, assuming the construction of all units permitted in 2021, is estimated to be 647,734 units, 9,383 (1.5%) more than the number of housing units counted at the 2020 census.

Growth by county in 2021 largely followed existing patterns of development around the state, with a few differences. Map 1, included after the analysis section, illustrates the number and proportion of building permits issued within the state in 2021, summarized by county. The highest number of single-family permits were in Rockingham County (637), followed by Hillsborough (456), and Merrimack (294), all of which are commonly among the counties with the top growth. However, Carroll County, not normally among the top five counties in growth, saw 286 single-family permits issued, a 48% rise over the previous year. Hillsborough County had by far the highest number of multi-family units permitted, at 1,188, followed by Rockingham (343), Strafford (202), and Merrimack (167).

In seven counties (Belknap, Carroll, Cheshire, Coos, Hillsborough, Merrimack, and Strafford), more permits were issued for multi-family units in 2021 than in the previous year. Six counties (Carroll, Cheshire, Coos, Grafton, Merrimack, and Sullivan) saw an increase in the number of single-family permits from the previous year. Only one county (Hillsborough) had more permits issued for multi-family units than for single-family in 2021.

At the community level, 67 towns across New Hampshire issued permits that added more than 1% to their single-family housing stock of the previous year, up from 57 towns in 2020. The communities issuing 50 or more permits for single-family homes were:

- |                |             |
|----------------|-------------|
| 1. Londonderry | 117 permits |
| 2. Hooksett    | 65          |
| 3. Merrimack   | 58          |
| 4. Rochester   | 54          |
| 5. Raymond     | 50          |

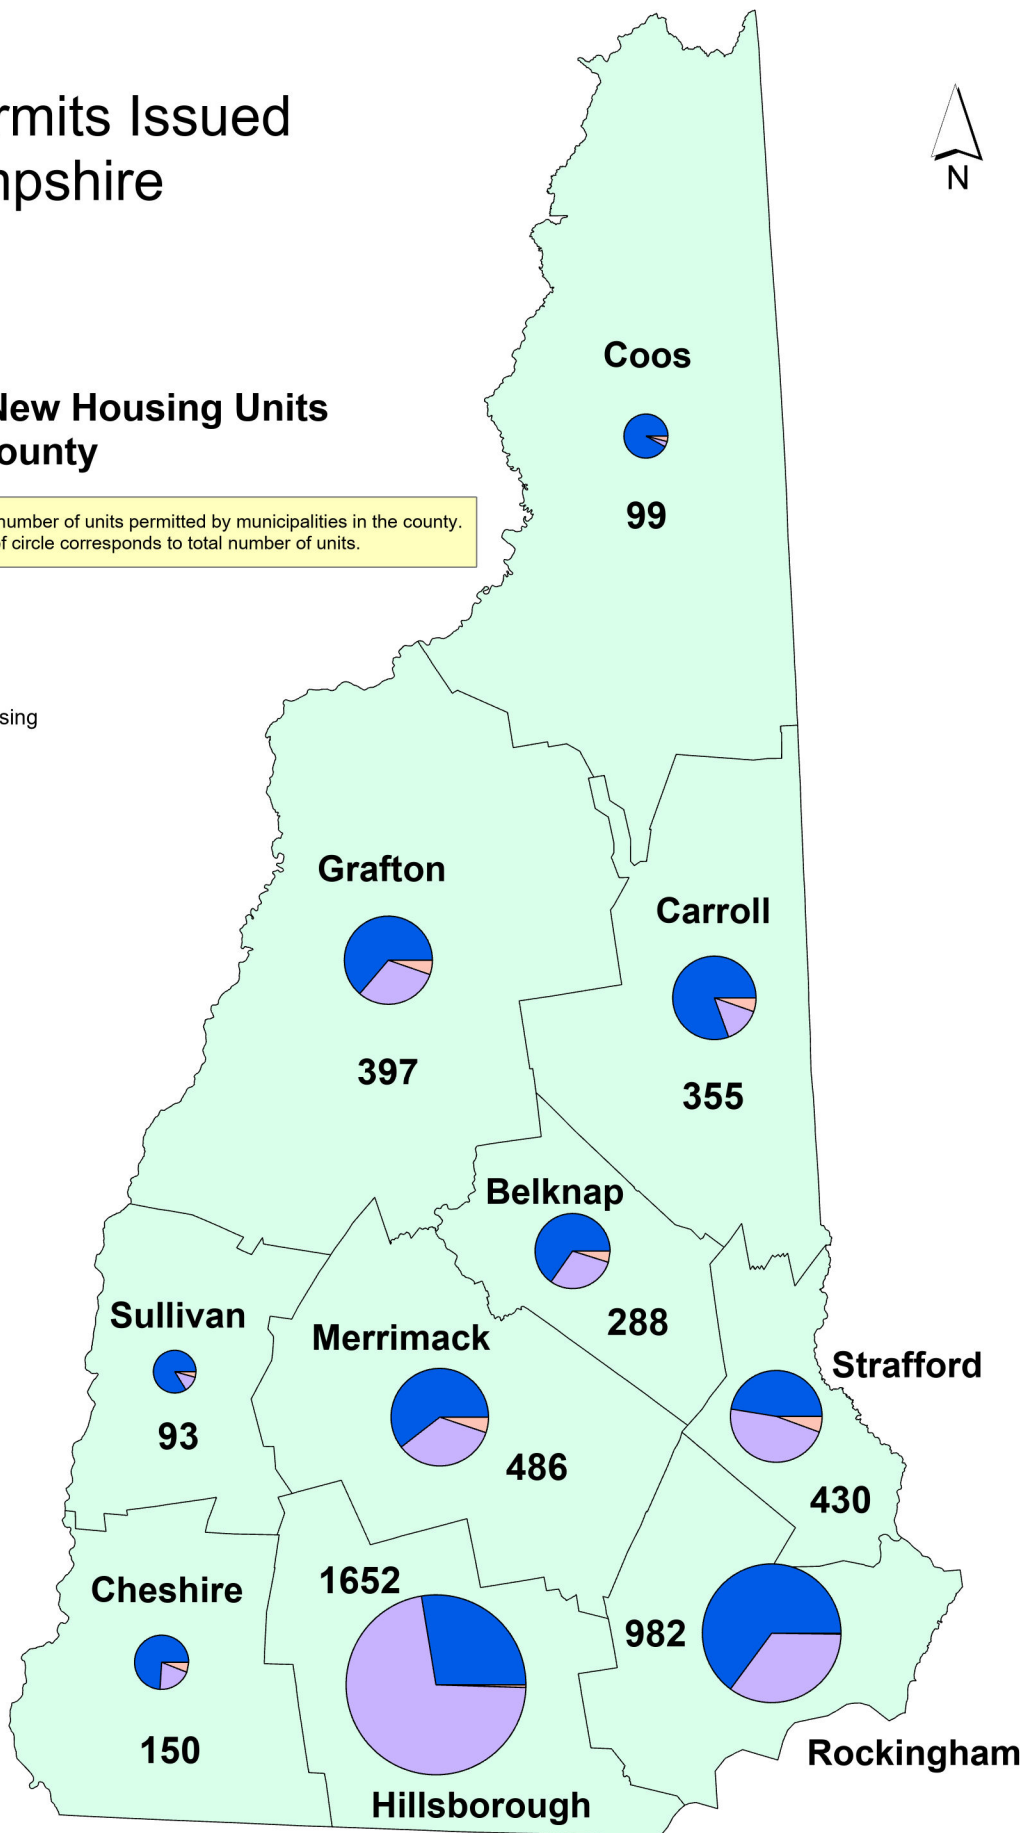

51 cities and towns issued multi-family permits that added more than 1% to their existing multi-family total, down from 54 in 2020. The following communities issued permits for the most multi-family housing units:

1. Merrimack	560 permits
2. Nashua	337
3. Concord	117
4. Manchester	104
5. Rochester	90

# Map 1: Building Permits Issued in New Hampshire 2021

## Distribution of New Housing Units Permitted per County

### **About the data and this series**

This report is one in a series of reports published as *Current Estimates and Trends in New Hampshire's Housing Supply*, last published in January 2022. The State Data Center at OPD and its predecessors has been issuing this series of reports since the mid-1970s. The reports present data that show short- and long-term trends in housing construction and total housing supply.

The permit data in this report update the 2020 Census and American Community Survey data and are collected via an annual mail survey of municipalities. Thanks to the efforts of municipalities statewide, the survey enjoys a 100 percent response rate. OPD devotes considerable time checking and refining survey returns to ensure as much consistency as practical. OPD does not conduct any field checks as part of the quality control process and relies upon municipal responses for accuracy.

The *Housing Supply* series is intended to present the latest annual trends based on reported building permit activity. Data users interested in long-term housing trends (which may span two or three decades) are urged to analyze patterns shown by combining decennial census years with mid-decade permit data. Year-to-year comparisons that mix permits and census years are not valid.

### **Definition change**

To the extent possible, the figures contained herein represent total housing units. In prior years (pre-1990), our data represented only year-round housing units. From 1990 on, the data do not distinguish between year-round and seasonal units because virtually all homes were built with similar construction characteristics. All units are included in the census and permit data. Some housing units have all the characteristics of year-round units but are in fact used on a seasonal or leisure-time basis.

The data user should remember that the decennial census is essentially a questionnaire asking persons to respond. It is not a detailed field survey of characteristics of housing units. The census effort is not aimed at quantifying or analyzing the seasonal or leisure home sector. Nevertheless, this sector does have an impact on the year-round data.

The problem of distinguishing between seasonal and year-round units also applies to the permit data. Building permits usually do not request information regarding intended use. For this reason, all permits issued for new dwellings are included in this report.

### **Data limitations**

Accounting for conversions is another difficulty in compiling housing supply data. Conversions may increase or decrease the total housing stock. There are many types of conversions: for example, a dwelling could be converted to an office, a single-family home may be converted to two or more dwelling units, or an accessory dwelling unit may be added. Many municipal permit systems are not adept at tabulating the pluses and minuses in dwelling units due to conversions. The same is true of demolitions. Often, a demolition permit does not require reporting the number of dwelling units involved.

The categorizing of row- or townhouses, often referred to as condominiums, is difficult. In the past, local officials were asked to report them under the single-family category. Nevertheless, this structure type has caused confusion among some local officials. Beginning with the 1990 report, any structure that is attached is reported as multi-family. This includes condominium

units as well as structures that may have been single-family houses but now have accessory dwelling units.

Building permits are typically valid for one year. Some permits never result in actual construction and the permit expires. Starting in 1990, OPD requested each municipality to report any expired permits from the previous year. These figures should show the number of structures and units not completed due to the expiration of the building permit or change in plans by the builder. Without this information, there is a possibility of double counting if a permit is re-issued. When expired permits are reported, OPD reduces the number of permits reported in the prior year.
